OM nucleic - nucleic search, using sw model

Run on: February 7, 2006, 14:34:40 ; Search time 7 Seconds  
(without alignments)  
3.186 Million cell updates/sec

Title: rrpcp2858  
Perfect score: 2858  
Sequence: 1 GGGCCCTCTCTGCTTTCTTCT.....GGGGTCACTGCTTCACTAGC 2858

Scoring table: IDENTITY NUC  
Gapop 10\_0 , Gapext 0.5

Searched: 200 seqs, 3902 residues

Total number of hits satisfying chosen parameters: 400

Minimum DB seq length: 8  
Maximum DB seq length: 80

Post-processing: Minimum Match 0%  
Maximum Match 100%  
Listing first 206 summaries

Database : fetchrni.seq.\*

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

#### SUMMARIES

Result No.	Score	Query Match	Length	ID	Description

Database : fetchrnpbm.seq.\*

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

XX
XX New oligonucleotide libraries comprising oligonucleotides which
PT selectively hybridize to mRNAs transcribed from a transcription unit of a
PT genome, useful for detecting tissue-, pathology-, and developmental-
PT specific genes.
XX
XX Example 1; SEQ ID NO 4511; 47pp; English.
XX
XX The present invention describes oligonucleotide libraries for detecting
CC messenger RNAs that populate a (sub-)transcriptome, where the (sub-)
CC transcriptome comprises messenger RNAs transcribed from multiple
CC transcription units that populate a genome. The library comprises several
CC oligonucleotides, each capable of hybridising selectively to a set of
CC messenger RNAs transcribed from a given transcription unit of the genome,
CC which encodes one or more messenger RNA splice variants. The
CC oligonucleotide libraries are useful for detecting mRNAs from a
CC biological sample, in expression profiling studies, in qualitatively or
CC quantitatively characterising the corresponding transcriptome, and in
CC detecting RNA transcripts and splice variants of human or animal
CC transcriptomes. The libraries may also be used as specialised mini
CC libraries to detect transcripts of a sub-transcriptome under a particular
CC biological or pathological state, and so allowing the detection of tissue
CC - and pathology-specific genes such as those genes only expressed in
CC specific tissue under a specific pathological condition; to detect
CC developmental specific genes; and to detect RNA transcripts and splice
CC variants of a transcriptome of a patient suffering from a particular
CC disorder. ABN27253 to ABN59589 represent oligonucleotide sequences from
CC rats, humans and mice, which are used in the exemplification of the
CC present invention. N.B. The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
XX New standardizing control for RNA samples to be tested on non-control
PT gene sequences on nucleic acid arrays, useful for producing a population
PT of distinct antisense RNA molecules from an initial population of
PT distinct mRNA molecules.
XX
XX Disclosure; SEQ ID NO 238; 282pp; English.
XX
XX The invention relates to a standardising control for RNA samples to be
CC tested on non-control gene sequences on nucleic acid arrays, comprising a
CC pool of unique tagged synthetic antisense mRNA molecules of a known
CC concentration, where any two sequences are unique if their sequences
CC differ. The non-control gene sequences on the nucleic acid array comprise
CC oncogenes, genes encoding tumour suppressors, cell cycle regulators, ion
CC channel proteins, transport proteins, intracellular signal transduction
CC modulator and effector factors, transcription factors, DNA-binding
CC proteins, receptors or cell-cell communication proteins, stress response
CC genes, apoptosis related genes, DNA synthesis/recombination/repair genes
CC for growth factors, chemokines, interleukins, interferons, hormones,
CC neurotransmitters, cell surface antigens or cell adhesion molecules. The
CC genes encoding cell-cell communication proteins comprise growth factors,
CC cytokines, chemokines, interleukins, interferons or hormones. The
CC standardising control for RNA samples to be tested on non-control gene
CC sequences on nucleic acid arrays is useful for producing a population of
CC distinct antisense RNA molecules from an initial population of distinct
CC mRNA molecules. This sequence represents an antisense oligonucleotide of
CC the invention.

XX
XX New nucleic acids encoding mammalian K-Hnov potassium channel proteins,
PT useful for the diagnosis and treatment of episodic ataxia with myokymia,
PT cardiac arrhythmia, epilepsy and Bartter's syndrome.
XX
XX Example 1; Page 31; 112pp; English.
XX
XX This sequence represents a DNA encoding a pore domain from a human
XX potassium channel and was used in the identification and isolation of
XX human K-Hnov cDNAs (AAZ11897-Z11915). K-Hnov proteins have a high degree
XX of homology to known potassium channels and may be alpha subunits, which
XX form the functional channel, or accessory subunits that act to modulate
XX the channel activity. K-Hnov cDNAs were isolated by extension of
XX expressed sequence tags (ESTs) which were related but not identical to
XX known human potassium channels. Potential polymorphisms detected as
XX sequence variants between multiple independent clones. Potassium channels
XX have critical roles in various cell types and biochemical pathways.
XX Defective potassium channels are known to cause four human diseases:
XX episodic ataxia with myokymia; cardiac arrhythmia (long QT syndrome);
XX epilepsy; and Bartter's syndrome. As potassium channels are critical
XX components of virtually all cells, it is likely that abnormal potassium
XX channels are also implicated in certain renal, cardiovascular and central
XX nervous system (CNS) disorders. Nucleotides encoding K-Hnov proteins may
XX be used for identifying homologous or related proteins and the DNA
XX sequences encoding them. They may be used to produce compositions that
XX modulate the expression and function of the K-Hnov protein and in
XX studying the biochemical pathways associated with it. They may also be
XX used for the recombinant production of K-Hnov protein in fermentation
XX cultures. Additionally, such nucleotides may be used in gene therapy
XX protocols for the treatment of diseases associated with abnormal

XX Screening for transdominant bioactive agents capable of altering
XX phenotype of a cell, by introducing library of randomized candidate
XX nucleic acids into several cells and selecting cells exhibiting altered
XX phenotype.
XX
XX Example 2; Fig 2; 38pp; English.
XX
XX The invention describes a method of screening (M) for a transdominant
XX intercellular bioactive agent capable of altering phenotype of a cell,
XX comprising introducing a molecular library of randomized candidate
XX nucleic acids into several cells, where each of the nucleic acids
XX comprises a different nucleotide sequence and screening the cells for a
XX cell exhibiting an altered phenotype, where the altered phenotype is due
XX to presence of a transdominant bioactive agent. The bioactive agent or
XX the nucleic acid encoding it are useful to identify target molecules,
XX i.e. the molecules with which the bioactive agent interacts. (M) is
XX useful in; cancer applications by introducing random libraries into any
XX tumour cell and identifying peptides which by induce apoptosis, cell
XX death, loss of cell division or decreased cell growth; for screening of
XX bioactive agents which restore the constitutive function of the brca-1 or
XX brca-2 genes, and other tumour suppressor genes important in breast
XX cancer such as the adenomatous polyposis coli gene; in cardiovascular

 PT New poly:cationic oligomer cell transfection agent (s) - are size-selected  
 PT for precise neutralisation of nucleic acid charge to facilitate uptake in  
 PT e.g. cancer cells.  
 XX  
 PS Claim 85; Page 81; 91pp; English.

This sequence represents the triplex forming oligonucleotide HN28ap (the phosphorothioate ester form is known as HN28apPTE), which targets the her-2/neu promoter. This sequence can be used with the polycationic oligomers of the invention. The polycationic oligomers are of discrete length, and have a repeating structure of formula (I): ((REP)m-(M) r-(REP)n-(M))l-(REP)p (I); M = flexible spacer; r,s = 0 or 1; m,n,p,l = the numbers of corresponding units, where the total number of repeating units (z) in (I) is l(m + n) + p; REP = repeating unit containing a cationic side-group (CSG) and having the structure -[X1-Q1-CO-Y2-Q2-CO]-; X1 = O or NR3; Y2 = O or NR4; one of Q1 and Q2 in each repeating unit = (CH2)w and the other = CHR'; w = 1-3; R',R3,R4 = H, 1-3C alkyl, a non-cationic side-group or a CSG, provided that one, and only one, CSG is present in each repeating unit. The polycationic oligomers are useful as transfecting agents for facilitating the uptake of nucleic acids into eukaryotic cells in vitro or in vivo, especially human cells, e.g. in research, diagnostics or gene therapy. The polycationic oligomer is especially used in the transfection of cancer cells, e.g. for the gene therapy treatment of prostate cancer by introduction of this sequence. The polycationic oligomer/nucleic acid complexes can be administered in pharmaceutical compositions. The size of the polycationic oligomers can be selected to neutralise the charge of a specific nucleic acid precisely and thus facilitate its uptake. The oligomers can also be designed to have varying degrees of biodegradability or to contain a wide range of biological active moieties, e.g. for targeting or labelling

 PT gene regulation and therapy.  
 XX  
 PS Example; Fig 3; 145pp; English.

AAQ88045 is a ds probe which corresp. to bases -68 to -19 on the HER2/c-erb B2/neu proto-oncogene. It contains a homopurine/homopyrimidine tract involved in triplex formation. The CU-rich (AAQ88043) and GA-rich (AAQ88044) RNA sequences corresp. to pyrimidine (parallel) or purine (antiparallel) third strand triplex binding motifs respectively. The CU-rich RNA was generated in vitro from a pBluescript deriv. in which the multicloning site was replaced with a 28 bt synthetic oligo duplex. When linearised with SstI and transcribed by T3 RNA polymerase the transcript AAQ88043 was generated. When linearised with KpnI and transcribed by T7 RNA polymerase in the opposite orientation, the corresp. antisense GA-rich strand was generated. Both transcripts also contained approx. 12 nts of flanking RNA derived from cloning and the polymerase start sequences. (Updated on 25-MAR-2003 to correct PN field.)

XX New oligomers contg. modified bases - which form a triplex with G-C
XX doublet in a DNA duplex, for treating and diagnosing HIV, hepatitis,
XX herpes malignancy and inflammation.
XX Claim 11; Page 64; 77pp; English.
XX The sequence depicts a HER-2 sequence from position -64 to -38 in the
XX promoter region. HER-2 is a marker for certain malignant tumours. The
XX sequence is a viral duplex sequence which contains a purine-rich region
XX concentrated on one chain of the duplex. The sequence may be prep'd. by
XX standard DNA synthesis. The HER-2 duplex sequence is used as a target for
XX novel oligomers which are capable of forming a triplex at physiological
XX pH by coupling into the major groove of the DNA duplex. Eight such
XX oligomers HER101-8 are capable of forming a triplex with this sequence.
XX The oligomers are used in the diagnosis and therapy of malignant tumours.
XX Similar oligomers may be used to target viral DNA duplexes specific for
XX HIV, herpes and other viruses. The triple helices form under mild
XX conditions thus assays may be carried out without subjecting the test
XX specimen to harsh conditions. The oligomer is able to inhibit gene
XX expression, as verified by in vitro systems. See also AAQ25452-25501 and
XX AAQ30226-448. (Updated on 25-MAR-2003 to correct PN field.)

CC This sequence is the fragment of the her-2/neu promoter targeted by the  
CC triplex-forming oligonucleotide HN28ap (the phosphorothioate ester form  
CC is known as HN28apPTE) (see AAV44666). HN28ap can be used with the  
CC polycationic oligomers of the invention. The polycationic oligomers are  
CC of discrete length, and have a repeating structure of formula (I):  
CC ((REP)m-(M) r-(REP)n-(M)s)1-(REP)p (I); M = flexible spacer; r,s = 0 or 1  
CC ; m,n,p,1 = the numbers of corresponding units, where the total number of  
CC repeating units (z) in (I) is 1(m + n) + p; REP = repeating unit  
CC containing a cationic side-group (CSG) and having the structure -[Y1-Q1-  
CC CO-Y2-Q2-CO]-; Y1 = O or NR3; Y2 = O or NR4; one of Q1 and Q2 in each  
CC repeating unit = (CH2)w and the other = CHR'; w = 1-3; R',R3,R4 = H, 1-3C  
CC alkyl, a non-cationic side-group or a CSG, provided that one, and only  
CC one, CSG is present in each repeating unit. The polycationic oligomers  
CC are useful as transfecting agents for facilitating the uptake of nucleic  
CC acids into eukaryotic cells in vitro or in vivo, especially human cells,  
CC e.g. in research, diagnostics or gene therapy. The polycationic oligomer  
CC is especially used in the transfection of cancer cells, e.g. for the gene  
CC therapy treatment of prostate cancer by introduction of HN28ap. The  
CC polycationic oligomer/nucleic acid complexes can be administered in  
CC pharmaceutical compositions. The size of the polycationic oligomers can  
CC be selected to neutralise the charge of a specific nucleic acid precisely  
CC and thus facilitate its uptake. The oligomers can also be designed to  
CC have varying degrees of biodegradability or to contain a wide range of  
CC biological active moieties, e.g. for targeting or labelling

XX Identifying molecule that modulates biological activity of native  
PT quadruplex DNA, by contacting test quadruplex DNA with candidate  
PT molecule, determining presence or absence of interaction between the  
PT molecule and test quadruplex DNA.  
XX  
XX Claim 2; Page 36; 43pp; English.  
PS  
XX

CC The invention relates to a method of identifying (M1) a molecule that  
 CC modulates biological activity of native quadruplex DNA, by contacting  
 CC test quadruplex DNA with candidate molecule, and determining presence or  
 CC absence of interaction between candidate molecule and test quadruplex  
 CC DNA, where candidate molecule that interacts with test quadruplex DNA is  
 CC identified as molecule that modulates biological activity of native  
 CC quadruplex DNA. (M1) is useful for identifying molecule that modulates  
 CC biological activity of native quadruplex DNA (claimed). (M1) is useful  
 CC for identifying molecule that modulates biological activity of native  
 CC quadruplex DNA, where the identified molecule stabilizes quadruplex  
 CC structure which can exert a therapeutic effect for certain cell  
 CC proliferative disorders e.g., colorectal cancer, leukemia's, Hodgkin's  
 CC disease, etc. This sequence corresponds to a test quadruplex molecule  
 CC used in the method of the invention.

 PT Identifying a quadruplex interacting molecule, useful for ameliorating a  
 PT cellular proliferative disorder, e.g. cancer, or a viral infection,  
 PT comprises contacting a test molecule with G-quadruplex nucleic acid.  
 XX  
 PS Claim 17; SEQ ID NO 14; 35pp; English.

XX The invention provides a method for identifying a quadruplex interacting  
 CC molecule. This involves: (a) contacting (i) a test molecule with a first  
 CC detectable nucleic acid comprising a G-quadruplex, and (ii) a second  
 CC nucleic acid; and (b) determining whether the second nucleic acid  
 CC competes for the test molecule, where competition identifies the test  
 CC molecule as a candidate molecule. Step (b) comprises detecting the amount  
 CC of the first nucleic acid to form a quadruplex and the amount of the  
 CC first nucleic acid not forming a quadruplex and determining the  
 CC concentration of the second nucleic acid required to compete for about  
 CC half of the test molecule. The second nucleic acid is plasmid DNA, short  
 CC duplex DNA, random single-stranded DNA that does not form a quadruplex  
 CC structure, single-stranded DNA that forms the same or a similar

CC quadruplex structure as the quadruplex structure in the first nucleic  
 CC acid, or single-stranded DNA that forms a quadruplex structure different  
 CC from the quadruplex structure in the first nucleic acid, a triplex  
 CC sequence or a duplex sequence in the Z conformation. The test molecule  
 CC may be a polypeptide linked to a phage or expressed by a microorganism.  
 CC transfected with a nucleic acid from an expression library. A compound  
 CC identified by the method of the invention is used in a claimed method for  
 CC ameliorating a cellular proliferative disorder, especially a cancer where  
 CC cellular proliferation is reduced or cell death is induced, and in a  
 CC claimed method for ameliorating a viral infection. The compound may also  
 CC be used to treat conditions such as angiogenesis, an adipocyte-related  
 CC disorder such as obesity, and leukemia. The present sequence is that of a  
 CC quadruplex nucleic acid from the HER2/neu gene. In a claimed method, the  
 CC quadruplex nucleic acid comprises a nucleotide sequence selected from 17  
 CC nucleotide sequences ADZ67877-ADZ67893 fully defined in the specification  
 CC and including the present sequence.

XX CC Detecting apoptosis comprises preparing a sample from which cells have
XX been removed and detecting at least one of nucleolin and PARP-I in the
XX sample.
XX
XX PS Disclosure; SEQ ID NO 33; 66pp; English.
XX
XX CC The present sequence is that of oligonucleotide GRO O, which can be used
XX as a control oligonucleotide in the method of the invention. The method
XX is for the detection of apoptosis. It involves preparing a sample from
XX which cells have been removed, and detecting nucleolin and/or poly(ADP-
XX ribose) polymerase (PARP-1) in the sample, where the sample is blood,
XX serum, plasma, tissue, tissue culture medium or sputum. Detection of
XX nucleolin involves detection of a complex between nucleolin and a
XX nucleolin binding molecule, preferably an anti-nucleolin antibody or a
XX guanosine-rich oligonucleotide. The method allows detection of excessive
XX apoptosis in a subject suspected of having AIDS, a neurodegenerative
XX disease, an ischaemic injury, an autoimmune disease, a tumour, a cancer
XX (especially endocervical adenocarcinoma, prostatic carcinoma, breast
XX cancer, leukaemia and non-small cell lung carcinoma), a viral infection,
XX an acute inflammatory condition or sepsis (all claimed).

 PT rheumatoid arthritis, asthma, psoriasis, and atherosclerosis, in a  
 PT patient comprises administering to the patient a composition comprising a  
 PT GRO.  
 XX XX  
 PS Disclosure; SEQ ID NO 34; 60pp; English.  
 XX XX  
 CC This invention relates to a novel method for treating inflammation in a  
 CC patient which comprises administering to the patient a composition  
 CC comprising a GRO (guanosine-rich oligonucleotide). The invention may be  
 CC useful for the development of compounds with an antiinflammatory,  
 CC analgesic, gynecological, hepatotropic, neuroprotective, nootropic,  
 CC antiarthritic, antirheumatic, gastrointestinal-Gen. or antitumor activity  
 CC whilst the disclosed sequence may prove useful for gene therapy. The  
 CC methods are useful for treating inflammation associated with an acute  
 CC inflammatory condition. The acute inflammatory condition is selected from  
 CC primary dysmenorrhea, acute alcoholic liver disease and acute  
 CC pancreatitis. The inflammation may also be of Alzheimer's disease or  
 CC associated with a chronic inflammatory disease. The chronic inflammatory  
 CC disease is selected from rheumatoid arthritis, asthma, gastrointestinal  
 CC tract disease, psoriasis, atherosclerosis, Crohns disease, ulcerative  
 CC colitis alcohol, chronic alcoholic liver disease, non-alcoholic  
 CC steatohepatitis and chronic pancreatitis. The present sequence is that of  
 CC the oligonucleotide GRO O which was used during the development of the  
 CC novel method of the invention.

XX
XX Method for distinguishing foetal cells from adult cells in blood - based

```

```

PT on amplification and detection of mRNA selectively expressed in foetal
PT cells.
XX
XX Example 4, 14; Col 49; 49pp; English.
XX
XX The invention relates to a method of enriching foetal cells from maternal
XX blood and for identifying such foetal cells. Foetal cells can be
XX CC distinguished from adult cells in a blood specimen by (a) treating a
XX CC blood specimen from a pregnant female to yield a mixture of cells
XX CC comprising foetal cells and adult cells; (b) amplifying one or more mRNAs
XX CC within the cells, the mRNAs being selectively expressed in target foetal
XX CC cells to be distinguished but not expressed in adult blood cells; (c)
XX CC performing in situ hybridisation on the cells under hybridising
XX CC conditions suitable to maintain cell membranes in a substantially intact
XX CC state and with a hybridisation medium comprising a detectably labelled
XX CC probe complementary to the amplified mRNA that is selectively expressed
XX CC in the target foetal cells but not expressed in adult blood cells; (d)
XX CC removing the hybridisation medium and unhybridised probe from the mixture
XX CC of cells to yield hybridised cells; and (e) detecting the labelled probe
XX CC remaining in the hybridised cells; whereby cells in which the labelled
XX CC probe is detected are identified as the target foetal cells; A second
XX CC method for determining the presence of a target nucleotide sequence in
XX CC individual foetal cells present in a cellular specimen is also provided.
XX CC The methods (especially the second) is useful for detecting HIV,
XX CC hepatitis viruses or herpes viruses in foetal cells, or for detecting
XX CC chromosomal abnormalities in foetal cells. The present sequence
XX CC represents a probe used for the detection of the Fragile X chromosome in
XX CC amniocytes and in peripheral blood mononuclear cells

XX Targeted alteration of the bacterial genome, useful e.g. for creating new
PT metabolic pathways, comprises double homologous recombination using
PT thymidine kinase as a selection marker, useful in analyzing the function
PT of genes and proteins.
XX
XX Example 1; SEQ ID NO 5; 34pp; French.
PS
XX
XX The invention relates to a method for targeted alteration of the genome
CC of a bacterium by double homologous recombination comprising: (a)
CC introducing into a bacterium that is deficient for thymidine kinase (TK)
CC activity a genetic construct (GC) comprising: (i) at least one region (R)
CC with a sequence homologous to a selected genomic segment that is to be
CC replaced, where R is long enough to support homologous recombination (HR)
CC ; (ii) a positive selection marker (PSM); and (iii) a negative counter-
CC selection marker (NSM) that includes a gene encoding TK; (b) growing the
CC bacteria under selection conditions for PSM, and selecting cells that
CC include PSM inserted into the chromosome; and (c) growing the selected
CC cells in presence of a nucleoside analog (I), metabolizable by TK, and
CC selecting bacteria that have survived, or can grow, in presence of (I),
CC i.e. cells that have an altered genome. The method is used to create new
CC metabolic pathways in bacteria; to analyze the function of genes and
CC proteins; and to screen nucleic acid libraries. The method is efficient;
CC reliable; applicable to many different bacteria and suitable for
CC automation. This sequence correspond to a PCR primer used in the method
CC of the invention.

XX  
XX NOVX polypeptides and polynucleotides, useful for preventing or treating  
PT a disorder associated with aberrant NOVX expression or activity e.g.,  
PT cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial  
PT asthma.  
XX  
XX Example C; Page 1042; 1103pp; English.  
XX  
XX This invention describes novel human NOVX polypeptides which have  
CC cytosolic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive  
CC activity. Pharmaceutical compositions comprising the NOVX proteins or  
CC nucleic acid molecules or NOVX antibodies are useful for preventing or  
CC treating a disorder associated with aberrant NOVX expression or activity  
CC e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial  
CC asthma. The products of the invention can be used for gene therapy or in  
CC a vaccine. ABX13460-ABX13462 and ABX97186-ABX97593 represent PCR primers  
CC and probes used in the amplification and isolation of the NOVX  
CC polynucleotides represented in ABX97008-ABX97185 which encode the  
CC polypeptides represented in ABU65041-ABU65218. The probes described in  
CC the invention are modified at the 5'-end by TET and the 3'-end by TAMRA

CC determining the presence or amount of the polypeptide or the nucleic acid  
CC molecule in a sample, methods for determining the presence of or  
CC predisposition to a disease associated with altered levels of expression  
CC of the above polypeptide or nucleic acid molecule in a first mammalian  
CC subject, a method for identifying an agent that binds to the above  
CC polypeptide, a method for identifying a potential therapeutic agent for  
CC use in the treatment of a pathology that is related to aberrant  
CC expression or physiological interactions of the polypeptide, a method of  
CC screening for a modulator of activity or of latency or predisposition to  
CC a pathology associated with the polypeptide and a method for modulating  
CC the activity of the polypeptide cited above. The composition and methods  
CC are useful for diagnosing, preventing or treating diseases such as  
CC diabetes, obesity, infectious diseases, anorexia, cancer-associated  
CC cachexia, cancer, neurodegenerative disorders like Alzheimer's disease or  
CC Parkinson's disease, immune disorders, haematopoietic disorders,  
CC dyslipidaemias, and other chronic diseases. These may also be used in  
CC chromosome mapping, tissue typing, preventive medicine and  
CC pharmacogenomics. The polypeptides are also useful as vaccines. The  
CC present sequence is an RTQ-PCR (real time quantitative PCR) probe used to  
CC assay tissue specific expression of a NOVX mRNA.

XX Pharmaceutical composition for treating asthma, has antisense

PT oligonucleotide containing less percentage of adenosine, targeted to

PT nucleic acids associated with lung airway or lung dysfunction, and

XX bronchodilating agent.

PS Claim 15; SEQ ID NO 1313; 763bp; English.

XX This invention describes a novel composition (a) a first active agent,  
CC comprising oligonucleotides, effective for alleviating  
CC bronchoconstriction, respiratory tract inflammation, allergies and  
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,  
CC surfactant depletion or hyposecretion, when administered to a mammal. The  
CC oligonucleotides are derived from a gene encoding or regulating  
CC expression of a target polypeptide associated with lung airway or lung  
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
CC The invention also describes a kit, that comprises: (a) a delivery  
CC device, in separate containers, (b) the oligonucleotides, (c)  
CC instructions for adding a carrier and for use of the kit. The composition  
CC of the invention has antiallergic, antiinflammatory, antiasthmatic, is a  
CC analgesic, hypotensive, immunosuppressive and cytosstatic activity, is a  
CC beta-adrenergic agonist. The composition is useful for preventing or  
CC treating a respiratory, lung or malignant disease. The administered  
CC composition comprises oligo and is administered to reduce the production  
CC or availability, or to increase the degradation of the target mRNA or to  
CC reduce the amount of target polypeptide present in the lungs. The  
CC pulmonary obstruction, and/or bronchoconstriction and/or lung  
CC inflammation, allergies and/or surfactant hypoproduction are associated  
CC with a disease or condition such as pulmonary vasoconstriction,  
CC inflammation, allergies, asthma, cystic fibrosis, allergic rhinitis, pulmonary  
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
CC hypertension, emphysema, chronic obstructive pulmonary disease, cancer.  
CC Transplantation rejection, pulmonary infections, bronchitis or cancer.  
CC The reduced adenosine content of the anti-sense oligos corresponding to  
CC thymidines present in the target RNA serves to prevent the breakdown of  
CC the oligonucleotides into products that free adenosine into the system  
CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to  
CC prevent any unwanted effects due to it

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Claim 15; SEQ ID NO 1317; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

 PS Example 6; SEQ ID NO 1; 27pp; English.  
 XX  
 CC The invention relates to inhibiting the ability of a fast-spiking  
 CC neuronal cell to discharge at a high rate comprising providing a compound

capable of inhibiting Kv3.4 activity (potassium channel subunit) to a  
 cell expressing Kv3 channels comprising a Kv3.4 subunit (especially the  
 Kv3.4a subunit), where the high rate of discharge is inhibited. Also  
 included are a method of manipulating neuronal ion channels (comprising  
 transfecting a fast-spiking neuronal cell with a vector encoding an siRNA  
 (small interfering RNA) directed against an mRNA encoding a Kv3.4 protein  
 where the siRNA is capable of inhibiting Kv3.4 expression in the cell), a  
 composition comprising an siRNA construct capable of inhibiting  
 expression of a Kv3.4 subunit in a neuronal cell and a method for  
 screening for compounds that inhibit the activity of a Kv3.4 protein  
 (comprising providing a cell expressing Kv3.4 protein, and a test  
 compound, and detecting the activity of the Kv3.4 protein in the presence  
 of the test compound). The method is useful for manipulating ion  
 channels, in particular for treating Parkinson's disease and other  
 neurological conditions, such as epilepsy, hearing, learning and memory  
 disorders. The present sequence is an siRNA targeting nucleotides 765-783  
 (relative to the start codon) of the rat Kv3.4 mRNA.

CC A method for screening a candidate compound for its ability to modulate  
 CC the expression of osteogenic protein-1 (OP-1) uses a cell transfected  
 CC with a nucleic acid sequence comprising a reporter gene and an upstream  
 CC non-coding sequence from OP-1. OP-1 is a tissue morphogenic protein. The  
 CC method is useful for screening compounds capable of stimulating or  
 CC inhibiting transcription and/or translation of the OP-1 gene, as well as  
 CC compounds which may be used as therapeutics for in vivo and ex vivo  
 CC mammalian applications, e.g. morphogen expression inducing compounds for  
 CC correcting and alleviating a diseased condition or to regenerate lost or

CC damaged tissue. The compounds may also be used to maintain viability of  
 CC the differentiated phenotype of cells in culture. Morphogen expression  
 CC inhibiting compounds identified by the new method can be used to modulate  
 CC the degree and/or timing of morphogen concentration. Compounds which up-  
 CC regulate levels of circulating OP-1 in vivo can be used to correct bone  
 CC metabolism diseases such as osteoporosis. This sequence represents the  
 CC TCC binding sequence or Wt-1/Egr-1 binding site sequence contained in the  
 CC upstream region of the osteogenic protein-1 (OP-1) gene. The DNA binding  
 CC proteins Wt-1 and Egr-1 bind to and control transcription of DNA  
 CC sequences at these sites

PT Novel replicase complex comprising hepatitis C virus NS5B replicase, a 3  
 nucleotide-long template to which a 2 nucleotide-long primer is annealed,  
 PT and template and primer which do not form a stable duplex in the absence  
 PT of HCV NS5B.  
 XX  
 PS Example; Page 6; 17pp; English.  
 XX  
 CC The invention relates to a replicase complex comprising a hepatitis C  
 CC virus (HCV) NS5B replicase protein, a linear nucleic acid template and a  
 CC complementary nucleic acid primer which is annealed to the 3' terminus of  
 CC the template, where the template is at least three nucleotides and the  
 CC primer is two or three nucleotides, and the template and primer do not  
 CC form a stable duplex in solution in the absence of the HCV NS5B protein.  
 CC The complex is useful for detecting HCV replicase activity and permits  
 CC establishment of sensitive RNA-dependent RNA polymerase assays to screen  
 CC and evaluate antiviral inhibitors and to improve the specificity and  
 CC efficacy of the inhibitors. The complex is also useful in the development  
 CC of a reliable system for determining kinetic and thermodynamic constants  
 CC of HCV NS5B-catalysed nucleotide incorporation and investigation of  
 CC mechanistic inhibitors for mis-incorporation or chain termination.  
 CC Specifically, the short RNA template and primer pairs are useful in  
 CC screening assays which are used for determining kinetic, thermodynamic  
 CC and mechanistic properties of NS5B replication and ultimately in the  
 CC development of inhibitors of NS5B. Newly identified inhibitors of  
 CC replicase activity may be used for developing anti-HCV pharmaceuticals.  
 CC Sequences ABK99271-ABK99296 represent HCV NS5B replicase RNA synthesis  
 CC templates

PT Identifying agent that increases glucose dependent insulin secretion in  
 PT pancreatic islet cells to treat diabetes, by contacting cells with agent,  
 PT detecting inhibitory effect of agent on phosphodiesterase 1C activity.  
 XX  
 PS Disclosure; Col 12; 17pp; English.  
 XX  
 CC PCR primers ABV72221-22 were used to amplify cDNA encoding murine  
 CC phosphodiesterase 4D (PDE4D). The primers were used to determine PDE4D  
 CC expression, in the course of the invention. The specification describes a  
 CC method for identifying an agent that increases glucose dependent insulin  
 CC secretion in pancreatic islet beta-cells. The method comprises obtaining  
 CC a pancreatic islet beta-cell culture, contacting the culture with a  
 CC desired agent, and detecting whether the agent has an inhibitory effect  
 CC on activity of PDE1C in the beta-cells. The presence of an inhibitory  
 CC effect indicates that agent increases glucose dependent insulin  
 CC secretion. The inhibitor identified by the method provides nutrient  
 CC dependent potentiation of insulin secretion that is not associated with  
 CC hypoglycemia. The method is useful for identifying an agent that  
 CC increases glucose dependent insulin secretion in pancreatic islet beta-  
 CC cells. The identified agent is useful for treating type II diabetes

XX Identifying compounds that modulate a target protein comprises providing  
PT cells transfected to provide a polynucleotide sequence encoding the  
PT target under control of a heterologous inducible promoter.  
XX  
XX Example 3; Page 108; 137pp; English.  
PS  
XX The invention relates to a method of identifying compounds that modulate  
XX a target protein, especially an ion channel protein or membrane receptor,  
CC comprising providing cells transfected to provide a polynucleotide  
CC sequence encoding the target under control of a heterologous inducible  
CC promoter. In an example of the invention the target gene is the mouse  
CC KCNC1 (potassium voltage-gated ion channel or Kv3.1) gene. The gene is  
CC cloned into a pcDNA4/TO expression vector and transfected into Chinese  
CC Hamster Ovary (CHO) cells. Primers ACC80600-ACC80601 were used to detect  
CC expression of the mouse KCNC1 gene in the the successfully transfected  
CC cell. The methods are useful identifying compounds that modulate a target  
CC protein for controlling expression of a target sequence, identifying  
CC target-expressing cells, expressing the target in its native form, and  
CC distinguishing between agonists, antagonists and non-functional  
CC interactions within the cellular environment

XX Detecting a cancer, e.g. breast or ovarian cancer, in a subject comprises  
XX determining the level of expression of a GOBLIN gene in a sample.  
XX  
XX Claim 93; SEQ ID NO 251; 217pp; English.  
XX  
XX The present invention describes a method for detecting a cancer cell in a  
XX subject. The method comprises determining the level of expression of a  
XX GOBLIN gene in a sample of the subject where elevated expression of the  
XX gene is indicative of a primary cancer or its micrometastasis or  
XX metastasis. Also described: (1) an isolated GOBLIN nucleic acid molecule;  
XX (2) a vector comprising the isolated nucleic acid of (1); (3) a  
XX monoclonal or polyclonal antibody that binds specifically to a GOBLIN  
XX polypeptide; (4) an isolated GOBLIN polypeptide, or its immunogenic  
XX epitope; (5) a fusion protein comprising the isolated polypeptide of (4);  
XX (6) a method of identifying a compound that reduces or antagonises  
XX expression of a GOBLIN gene; (7) a process for identifying or determining  
XX and producing a compound; (8) an isolated nucleic acid that antagonises  
XX expression of a GOBLIN gene, where the nucleic acid comprises a  
XX nucleotide sequence comprising any of the 21 bp sequences of SEQ ID  
XX NOS:46-353; (9) an isolated antisense nucleic acid that antagonises  
XX expression of a GOBLIN gene, where the nucleic acid comprises a  
XX nucleotide sequence capable of selectively hybridising to mRNA encoded by  
XX the isolated nucleic acid of (1); and (10) a process for monitoring the  
XX efficacy of treatment of a cancer in a subject. GOBLIN sequences have  
XX cytostatic activity, and can be used in gene therapy. An isolated GOBLIN  
XX nucleic acid molecule can be used for detecting a cancer cell. An  
XX isolated GOBLIN polypeptide can be used for producing an antibody. The  
XX method, nucleic acid molecules and the encoded polypeptides, and  
XX antibodies can be used for detecting a cancer, e.g. squamous cell  
XX carcinoma, hepatocellular carcinoma, melanoma, head and neck cancer,  
XX adenocarcinoma, gastrointestinal cancer (e.g. gastric, colon, or  
XX pancreatic cancer), renal cell cancer, bladder cancer, prostate cancer,  
XX non-squamous carcinoma, glioblastoma, medullablastoma, ovarian cancer  
XX (e.g. basal cell carcinoma, clear cell carcinoma, endometrioid ovarian  
XX cancer, or mucinous ovarian cancer), or breast cancer (e.g. lobular  
XX lesion, stromal lesion, ductal carcinoma, ductal adenocarcinoma,  
XX proliferative fibrocytic change, epitheliosis, intraductal papilloma, or  
XX atypical ductal hyperplasia) in a subject. The antagonist of GOBLIN  
XX function, method, and compound are useful for treating hyperproliferative  
XX disease, like cancer. The present sequence represents a small interfering  
XX RNA (siRNA) oligonucleotide targeted to human GOBLIN, which is used in  
XX the exemplification of the present invention.

 XX Identifying an individual predisposed to or capable of transmitting short  
 XX PT stature to its offspring, comprises assaying DNA sample for the number of  
 XX PT specified nucleotide triplets in the FRAXG CpG island.  
 XX PS Disclosure; SEQ ID NO 12; 40pp; English.  
 XX CC The present invention relates to a method for identifying an individual  
 XX CC who is predisposed to or is capable of transmitting to its offspring an  
 XX CC increased likelihood of developing short stature. The method comprises  
 XX CC assaying a sample of DNA from the individual for the number of (CGG)n/  
 XX CC (CCG)n nucleotide triplets in the FRAXG CpG island on chromosome Xp22.1.  
 XX CC FRAXG is a rare heritable, folate-sensitive fragile site (RHFFS). The  
 XX CC (CGG)n/ (CCG)n designation indicates that on one strand of genomic DNA,  
 XX CC the sequence is 5'-CGG-3' while on the complementary strand of DNA the  
 XX CC sequence is 5'-CGG-3'. An increased number of (CGG)n/ (CCG)n nucleotide  
 XX CC triplets in at least one FRAXG allele in the individual compared to the  
 XX CC average number of (CGG)n/ (CCG)n nucleotide triplets in FRAXG alleles  
 XX CC from a normal population of individuals indicates the individual has an  
 XX CC increased likelihood of developing short stature or offspring receiving  
 XX CC from the individual a FRAXG allele having an increased number of (CGG)n/  
 XX CC (CCG)n nucleotide triplets will have an increased likelihood of  
 XX CC developing short stature. The method also comprises assaying the DNA from  
 XX CC the individual for methylation of cytosine nucleotides within the FRAXG  
 XX CC CpG island, where hypermethylation of one or more of the cytosine  
 XX CC nucleotides indicates the individual has an increased likelihood of  
 XX CC developing short stature or that offspring receiving from the individual  
 XX CC a FRAXG allele having hypermethylated cytosine nucleotides in the FRAXG  
 XX CC CpG island will have an increased likelihood of developing short stature.  
 XX CC The present sequence was used to illustrate the invention.

XX Sequencing complex genomes, present as fragments in a cosmid library - by  
PT sequencing end-specific nucleotides of each clone then correlating with  
PT spatial relationship of cosmid, esp. for mammalian chromosomes.  
XX Example 4; Page 93; 128pp; English.  
XX Sequences were determined from the ends of chromosome 11-specific cosmids  
CC by automated sequencing without intermediate subcloning. A sample of 371  
CC DNA sequence fragments were determined and of these, 277 were suitable  
CC for STS primer prediction by computer analysis (using the "Primer"  
CC program available from E.Lander, MIT). The STSs and cosmids were mapped  
CC by in situ hybridisation, somatic cell hybrid analysis or both. Using  
CC this method, 370 STSs specific for human chromosome 11 were generated and  
CC most of them were regionally mapped. This procedure illustrates a novel  
CC method for sequencing complex genomes, designated "sequence sampled  
CC mapping". The sequence sampled mapping method is useful for the  
CC completion of high density sequence-based maps, and ultimately, for the  
CC complete sequencing of genomic DNA directly from cosmid clones. See  
CC AAQ82001-Q82706 and AAQ91325-Q91358 for STS primers. (Updated on 25-MAR-  
CC 2003 to correct PN field.)

XX Amplifying a target nucleic acid in sample, useful in e.g. clinical  
PT applications, genetic engineering and for assaying blood, urine, plant  
PT and animal tissues and environmental materials like soil and food.  
XX Example; Page 271; 332pp; Japanese.

XX The invention relates to the amplification of a nucleic acid. This  
CC comprises using a nucleic acid as template, deoxypolynucleotide 3-  
CC phosphate, a chimeric oligonucleotide primer with a ribonucleotide  
CC provided at the 3'-terminus or in the 3'-terminal side, DNA polymerase  
CC with a chain-transfer activity, an RNaseH or endonuclease, and incubating  
CC the mixture to give a reaction product. The method is useful for  
CC amplifying a target nucleic acid in a sample, which is useful in e.g.  
CC clinical applications including disease diagnosis, genetic engineering,  
CC in assaying blood, urine, plant and animal tissues, environmental  
CC materials like soil and food and identification of microorganisms. The  
CC method of the invention, known as an isothermal and chimeric primer-  
CC initiated amplification of nucleic acids (ICAN) method, is highly  
CC sensitive and specific. Sequences given in records ABN80338-ABN80532  
CC represent target nucleic acids, chimeric oligonucleotides and  
CC oligonucleotide primers and probes of the invention. Chimeric  
CC oligonucleotides are DNA/RNA hybrids

DR Method for stabilizing and storing reaction reagents for specific  
 PT amplification and detection of nucleic acids particularly in e.g.  
 PT identifying pathogenic microorganisms or viruses in sample.

PS Example 15; Page 175; 177pp; Japanese.

XX The invention relates to a novel stabilising reaction reagent for use in  
 CC the amplification and/or detection of a target nucleic acid comprising:  
 CC preparing a reaction mixture with e.g. a nucleic acid as template, at  
 CC least 1 primer and RNaseH; and incubation of the reaction mixture for a  
 CC defined period of time to form a reaction product during the  
 CC amplification of such target nucleic acid. The method is useful for  
 CC stabilising and long-term storage of reaction reagents for highly  
 CC sensitive and specific amplification and detection of nucleic acids  
 CC particularly in identifying pathogenic microorganisms or viruses in a  
 CC sample using chimeric oligonucleotide primers, which is useful in genetic  
 CC engineering and clinical medicine. This polynucleotide sequence

CC represents an oligo relating to the novel stabilising reaction reagent  
 CC method of the invention

PT nucleic acids associated with lung airway or lung dysfunction, and  
PT bronchodilating agent.  
XX  
PS Claim 15; SEQ ID NO 1310; 763pp; English.  
XX  
CC This invention describes a novel composition (a) a first active agent,  
CC comprising oligonucleotides, effective for alleviating  
CC bronchoconstriction, respiratory tract inflammation, allergies and  
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,  
CC surfactant depletion or hyposecretion, when administered to a mammal. The  
CC oligonucleotides are derived from a gene encoding or regulating  
CC expression of a target polypeptide associated with lung airway or lung  
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
CC The invention also describes a kit, that comprises: (a) a delivery  
CC device, in separate containers, (b) the oligonucleotides, (c)  
CC instructions for adding a carrier and for use of the kit. The composition  
CC of the invention has antiallergic, antiinflammatory, antiasthmatic,  
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a  
CC beta-adrenergic agonist. The composition is useful for preventing or  
CC treating a respiratory, lung or malignant disease. The administered  
CC composition comprises oligo and is administered to reduce the production  
CC or availability, or to increase the degradation of the target mRNA or to  
CC reduce the amount of target polypeptide present in the lungs. The  
CC pulmonary obstruction, and/or bronchoconstriction and/or lung  
CC inflammation, allergies and/or surfactant hypoproduction are associated  
CC with a disease or condition such as pulmonary vasoconstriction,  
CC inflammation, allergies, asthma, impeded respiration, respiratory  
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
CC hypertension, emphysema, chronic obstructive pulmonary disease, cancer,  
CC transplantation rejection, pulmonary infections, bronchitis or cancer.  
CC The reduced adenosine content of the anti-sense oligos corresponding to  
CC thymidines present in the target RNA serves to prevent the breakdown of  
CC the oligonucleotides into products that free adenosine into the system  
CC e.g., lung, brain, heart, kidney, etc., tissue environment and thereby, to  
CC prevent any unwanted effects due to it

Pharmaceutical composition for treating ailments associated with impaired
respiration, has oligo(s) antisense to specific gene(s) or its
corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
ubiquinone.
XX
Claim 15; SEQ ID NO 1310; 872pp; English.
XX
The invention relates to a novel pharmaceutical composition, which has a
first active agent comprising an oligonucleotide antisense to the
initiation codon, coding regions, 5' or 3' end genomic flanking regions,
5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
junctions of genes encoding a polypeptide associated with lung and/or
nasal airway dysfunction and a second active agent comprising an
antiinflammatory steroid and ubiqunone. A composition of the invention
has antiinflammatory, antiallergic, antiasthmatic, hypotensive, or
immunosuppressive, and cytostatic activity. The composition may have a
use in antisense gene therapy. The composition is useful for treating or
preventing a respiratory, lung or malignant disease or condition, also
for enhancing the prophylactic or therapeutic respiratory effect of an
antiinflammatory steroid in a subject, for reducing or depleting levels
of, or reducing sensitivity to adenosine, reducing levels of adenosine
receptor, producing bronchodilation, increasing levels of ubiqunone or
lung surfactant in a subject's tissue, or treating bronchoconstriction,
lung inflammation, lung allergies, or a respiratory disease or condition.

Detecting a cancer, e.g. breast or ovarian cancer, in a subject comprises
determining the level of expression of a GOBLIN gene in a sample.
XX
Claim 93; SEQ ID NO 250; 217pp; English.
XX
The present invention describes a method for detecting a cancer cell in a
subject. The method comprises determining the level of expression of a
GOBLIN gene in a sample of the subject where elevated expression of the
gene is indicative of a primary cancer or its micrometastasis or
metastasis. Also described: (1) an isolated GOBLIN nucleic acid molecule;
(2) a vector comprising the isolated nucleic acid of (1); (3) a
monoclonal or polyclonal antibody that binds specifically to a GOBLIN
polypeptide; (4) an isolated GOBLIN polypeptide, or its immunogenic
epitope; (5) a fusion protein comprising the isolated polypeptide of (4);
(6) a method of identifying a compound that reduces or antagonises
expression of a GOBLIN gene; (7) a process for identifying or determining
```

CC and producing a compound; (8) an isolated nucleic acid that antagonises  
CC expression of a GOBLIN gene, where the nucleic acid comprises a  
CC nucleotide sequence comprising any of the 21 bp sequences of SEQ ID  
CC NOS:46-353; (9) an isolated antisense nucleic acid that antagonises  
CC expression of a GOBLIN gene, where the nucleic acid comprises a  
CC nucleotide sequence capable of selectively hybridising to mRNA encoded by  
CC the isolated nucleic acid of (1); and (10) a process for monitoring the  
CC efficacy of treatment of a cancer in a subject. GOBLIN sequences have  
CC cytostatic activity, and can be used in gene therapy. An isolated GOBLIN  
CC nucleic acid molecule can be used for detecting a cancer cell. An  
CC isolated GOBLIN polypeptide can be used for producing an antibody. The  
CC method, nucleic acid molecules and the encoded polypeptides, and  
CC antibodies can be used for detecting a cancer, e.g. squamous cell  
CC carcinoma, hepatocellular carcinoma, melanoma, head and neck cancer,  
CC adenocarcinoma, gastrointestinal cancer (e.g. gastric, colon, or  
CC pancreatic cancer), renal cell cancer, bladder cancer, prostate cancer,  
CC non-squamous carcinoma, glioblastoma, medullablastoma, ovarian cancer  
CC (e.g. basal cell carcinoma, clear cell carcinoma, endometrioid ovarian  
CC cancer, or mucinous ovarian cancer), or breast cancer (e.g. lobular  
CC lesion, stromal lesion, ductal carcinoma, ductal adenocarcinoma,  
CC proliferative fibrocystic change, epitheliosis, intraductal papilloma, or  
CC atypical ductal hyperplasia) in a subject. The antagonist of GOBLIN  
CC function, method, and compound are useful for treating hyperproliferative  
CC disease, like cancer. The present sequence represents a small interfering  
CC RNA (siRNA) oligonucleotide targeted to human GOBLIN, which is used in  
CC the exemplification of the present invention.

PT receptor-associated kinase-1, useful for preparing a composition for  
PT treating hyperproliferative or autoimmune disorder or inflammation.

XX Example 15; SEQ ID NO 58; 66pp; English.

XX The present invention relates to antisense compounds targeted to a  
CC nucleic acid encoding interleukin-1 (IL-1) receptor-associated kinase-1  
CC (IRAK-1). The antisense compound comprises an antisense oligonucleotide  
CC that specifically hybridises with the nucleic acid and inhibits the  
CC expression of IRAK-1. The antisense oligonucleotide is a chimeric  
CC oligonucleotide. The antisense oligonucleotide comprises at least one  
CC modified internucleoside linkage, preferably a phosphorothioate linkage.  
CC It also comprises at least one modified sugar moiety, preferably a 2'-O-  
CC methoxyethyl (2'-MOE) sugar moiety. The antisense oligonucleotide further

CC comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonucleotides are useful for the treatment of diseases such as hyperproliferative disorders, e.g. cancer, autoimmune disorders, altered bone metabolism, and inflammation. The present sequence represents an antisense oligonucleotide used in the examples of the present invention.

XX PT receptor-associated kinase-1, useful for preparing a composition for

XX PT treating hyperproliferative or autoimmune disorder or inflammation.

XX PS Example 15; SEQ ID NO 125; 66pp; English.

XX CC The present invention relates to antisense compounds targeted to a

XX CC nucleic acid encoding interleukin-1 (IL-1) receptor-associated kinase-1

XX CC (IRAK-1). The antisense compound comprises an antisense oligonucleotide

XX CC that specifically hybridizes with the nucleic acid and inhibits the

XX CC expression of IRAK-1. The antisense oligonucleotide is a chimeric

XX CC oligonucleotide. The antisense oligonucleotide comprises at least one

XX CC modified internucleoside linkage, preferably a phosphorothioate linkage.

XX CC It also comprises at least one modified sugar moiety, preferably a 2'-O-

XX CC methoxyethyl (2'-MOE) sugar moiety. The antisense oligonucleotide further

XX CC comprises at least one modified nucleobase, preferably a 5-

XX CC methylcytosine. The antisense oligonucleotides are useful for the

XX CC treatment of diseases such as hyperproliferative disorders, e.g. cancer,

XX CC autoimmune disorders, altered bone metabolism, and inflammation. The

XX CC present sequence represents a human IRAK-1 DNA target sequence for an

XX CC antisense oligonucleotide.

XX PT Antisense oligonucleotide compounds for modulating expression of

XX PT transforming growth factor beta, and for treating fibrosis and

XX PT inflammation.

XX PS Example 19; SEQ ID NO 35; 97pp; English.

XX CC The invention relates to antisense compounds, especially oligonucleotides

XX CC specifically hybridizable with nucleic acids encoding human transforming

XX CC growth factor-beta (TGF-beta), can modulate the expression of TGF-beta

XX CC (either beta 1 or beta 2). Also included are methods of inhibiting the

XX CC expression of TGF-beta1 and TGF-beta2 (comprising contacting cells or

XX CC tissues with the antisense compounds) and methods of treating an animal

XX CC having a disease/condition associated with TGF-beta1/TGF-beta2 comprising

XX CC the administration of the compounds. The compounds are antisense

XX CC oligonucleotides, comprising at least one modified internucleoside

XX CC linkage, especially a phosphorothioate linkage. They may comprise at

XX CC least one modified sugar moiety, especially a 2'-O-methoxyethyl sugar

CC moiety. They may comprise at least one modified nucleobase, especially a  
CC 5-methylcytosine. The compounds are used for treating inflammation or  
CC fibrosis or a fibrotic condition, especially fibrotic scarring,  
CC peritoneal adhesions, lung fibrosis, conjunctival scarring and in cancer.  
CC The present sequence is an antisense oligonucleotide targeting TGF-beta-1  
CC cDNA from human.

PT Novel HYPLIP1 and FCHL1 genes and their sequence variations associated  
PT with lipid disorder and cancer, useful for prognosis, diagnosis and  
PT treatment of lipid disorders.  
XX  
PS Claim 11; Page 72; 102pp; English.  
XX  
CC This invention relates to the cDNA and protein sequences of novel  
CC proteins HYPLIP1 or FCHL1 and to sequence variations within these genes  
CC that have been shown to be associated with lipid disorders.  
CC Oligonucleotide probes that hybridise to the cDNA sequence are useful for  
CC analysing the expression of FCHL1 by detecting the expression of the mRNA  
CC transcript in the sample. A host cell transformed with the cDNA of the  
CC invention is useful for producing the protein by recombinant means.  
CC Pharmaceutical compositions based on the sequences of the invention are  
CC useful for treating or preventing a lipid disorder associated with  
CC expression of FCHL1 such as familial combined hyperlipidaemia, coronary  
CC artery disease, atherogenic lipoprotein phenotype,  
CC hyperapobetalipoproteinaemia, hypertriglyceridaemia, familial  
CC dyslipidaemic hypertension, syndrome X, obesity, insulin resistance and  
CC hypercholesterolaemia. The cDNA sequence is useful in the diagnosis or  
CC prognosis of predisposition to lipid disorders and cancers, and also to

CC identify a molecule which enhances or decreases the HYPLIP1 or FCHL1  
CC activity. The present sequence represents an oligonucleotide primer  
CC specific for the mouse HYPLIP1 locus of the invention. The mouse HYPLIP1  
CC locus is situated on chromosome 3

XX Novel isolated polynucleotide comprising a mouse or human familial  
XX combined hyperlipidaemia 1 gene having a variation that is associated with  
XX a lipid disorder, useful for identifying susceptibility to the lipid  
XX disorder.  
XX Claim 11; Page 38; 63pp; English.  
XX The invention discloses isolated polynucleotides comprising mouse HYPLIP1  
XX cDNA sequence, mouse HYPLIP1 genomic DNA, or the homologous human  
XX familial combined hyperlipidaemia 1 (FCHL1) gene, where a variation in  
XX the sequence is associated with a lipid disorder. Also claimed is an  
XX isolated polypeptide comprising a variant form of the mouse HYPLIP1 amino  
XX acid sequence, or a variant form of a fully defined human FCHL1 amino  
XX acid sequence, where the variant is associated with the lipid disorder.  
XX an isolated polynucleotide having at least 12 contiguous nucleotides of  
XX the isolated polynucleotides, where the 12 contiguous nucleotides span  
XX the variation position, an isolated polypeptide comprising 4 contiguous  
XX amino acids of the encode polypeptides, where the 4 contiguous amino  
XX acids span the variation position, a kit for the detection of the FCHL1  
XX locus comprising, an isolated antibody, identifying susceptibility to a  
XX lipid disorder which comprises comparing the nucleotide sequence of the  
XX suspected FCHL1 allele with a wild-type FCHL1 nucleotide sequence, where  
XX the difference between the suspected allele and the wild-type sequence  
XX identifies a sequence variation of FCHL1 nucleotide sequence and a  
XX pharmaceutical composition. Also disclosed is a transgenic animal which  
XX carries an altered HYPLIP1 or FCHL1 allele and a method for screening  
XX drugs for inhibition or restoration of FCHL1 gene function as an anti-  
XX lipid disorder or anti-cancer therapy. the polynucleotides, polypeptides  
XX and antibodies are useful for treating or preventing (e.g. gene therapy)

CC a lipid disorder associated with expression of FCHL1, for diagnosis or  
CC prognosis of predisposition to lipid disorder, and cancer and for  
CC treating a lipid disorder such as familial combined hyperlipidaemia,  
CC coronary artery disease, atherogenic lipoprotein phenotype,  
CC hyperapobetalipoproteinaemia, hypertriglyceridaemia, low density  
CC lipoprotein (LDL) subclass B, familial dyslipidemic hypertension,  
CC syndrome X, hypercholesterolaemia, obesity, insulin resistance and  
CC cancer. The sequence presented is a PCR primer which was used to amplify  
XX part of the mouse HYPLIP1 locus.

XX Novel human FCHL1 or mouse HYPLIP1 polypeptide, useful for drug  
XX screening, peptide therapy of lipid disorder or cancer.  
XX Claim 11; Page 35; 56pp; English.  
XX The invention describes an isolated polypeptide (I) comprising a variant  
XX form of a mouse HYPLIP1 polypeptide sequence (S1) or a human FCHL1  
XX polypeptide sequence (S2), not given in the specification, where the  
XX variant form is associated with cancer, or an amino acid sequence having  
XX at least 65 % sequence identity to (S1) or (S2). A composition comprising  
XX DNA encoding (I) is useful for treating or preventing cancer associated  
XX with expression of FCHL1. FCHL1 gene or HYPLIP1 gene and its product are  
XX useful for the study of metabolic pathway and cellular mechanism to

CC identify other genes, receptors and relationships that contribute to  
 CC lipid disorder and cancer. FCHL1 gene or its fragments are useful in gene  
 CC therapy to increase the amount of the expression products of the gene for  
 CC the treatment of lipid disorder or cancerous cells. The sequence  
 CC variation of FCHL1 gene or HYPLI1 gene is also useful in the diagnosis  
 CC and prognosis of predisposition to lipid disorder and cancer. Antisense  
 CC polynucleotide sequences are useful in preventing or diminishing the  
 CC expression of HYPLI1 or FCHL1 locus. This sequence represents a primer  
 CC used in the analysis of the mouse HYPLI1 gene.

XX Immunostimulatory DNA binding proteins to identify immunostimulatory DNA  
 PT functional modifiers, immunostimulatory DNA binding competitors and to  
 PT optimize immunostimulatory oligodeoxynucleotides for stimulation.

PS Example 1; Page 45; 95pp; English.

XX The invention relates to the use of an immunostimulatory single-stranded  
 CC DNA-binding protein in screening assays to identify compounds which bind  
 CC to it and thereby act as functional modifiers of immunostimulatory  
 CC oligodeoxynucleotide (ODN) activity. Such modifiers of ODN activity  
 CC consist of immunostimulatory DNA binding inhibitors, immunostimulatory

CC DNA mimics, and immunostimulatory DNA agonists and antagonists.  
 CC Immunostimulatory DNA-binding proteins can also be used in screening  
 CC methods to identify immunostimulatory DNA binding competitors, and to  
 CC optimize an immunostimulatory ODN for immune stimulation. Isolated  
 CC complexes of an immunostimulatory DNA-binding protein bound to an  
 CC immunostimulatory ODN can additionally be used to screen a panel of  
 CC candidate target molecules to identify the cellular target molecules of  
 CC the immunostimulatory ODN. The immunostimulatory DNA-binding proteins  
 CC used in the methods of the invention are the RNA-binding proteins  
 CC nucleolin, hnRNP D, AUFI, hnRNP A1 and lupus La protein. The screening  
 CC methods are useful for identifying a compound that inhibits interaction  
 CC between immunostimulatory DNA and an immunostimulatory DNA-binding  
 CC protein and for identifying agonists useful in immunotherapy. The complex  
 CC is useful in screening for immunostimulatory DNA cellular target  
 CC molecules. The candidate immunostimulatory ODN competitors allow the  
 CC investigation of structure/activity relationships of immunostimulatory  
 CC DNA-binding proteins and immunostimulatory ODNs. The present sequence  
 CC represents an oligonucleotide used in an exemplification of the invention

XX Simultaneous detection of diffraction binding assay by contacting surface  
 PT of substrate with medium to bind pre-selected analytes with analyte-  
 PT specific receptors, illuminating, detecting, analyzing, and identifying  
 PT analytes.

PS Example 10; Page 30; 54pp; English.

XX The present invention relates to a diffraction binding assay method and

CC apparatus for assay of multiple analytes. The assay is detected

CC simultaneously by contacting a surface of a substrate with medium to

CC permit pre-selected analytes present in solution to bind with their

CC analyte-specific receptors, illuminating the substrate, detecting light

CC diffracted from the substrate, analysing the diffracted light, and

CC identifying from diffraction image one or more analytes present in the

CC medium. The method is used for detecting simultaneously at least two

CC analytes. It is useful in a light diffraction assay for detecting the

CC presence or absence of at least two analytes. The present DNA sequence is

CC a biotinylated oligonucleotide which is used for DNA hybridisation in the

CC exemplification of the invention

PS

XX

XX The present invention relates to antisense compounds, compositions and

CC methods for modulating the expression of MEKK4 (also referred as mitogen-

CC activated protein kinase kinase 4; MAP3K4; MAP three kinase 1; MAP/ERK

CC kinase kinase 4; MAPKKK4; MTK1). The antisense oligos are useful for

CC inhibiting the expression of MEKK4 in cells or tissues. They are also

CC useful for treating an animal having a disease or condition associated

CC with MEKK4 such as immunological, inflammatory, hyperproliferative

CC disorder or cancer. Sequences of the invention are also useful for

CC diagnostics, therapeutics, prophylaxis and as research reagents and kits.

CC They are also useful in antisense therapy. The present sequence is an

CC antisense oligonucleotide targeted to human MEKK4 DNA. This sequence is

CC used in the exemplification of the invention

Use of nucleic acids containing an unmethylated CpG - for treating a
PT subject having or at risk of having an acute decrement in air flow or
PT inhibiting an inflammatory response.
XX
PS Claim 35; Page 27; 65pp; English.
XX
This sequence represents an unmethylated CpG dinucleotide, and can be
CC used in the method of the invention. The method is for treating a subject
CC having or at risk of having an acute decrement in air flow, comprising
CC administering a nucleic acid sequence containing at least one
CC unmethylated CpG. The nucleic acids containing an unmethylated CpG
CC dinucleotide affect an immune response in a subject by activating natural
CC killer cells (NK) or redirecting a subject's immune response from a Th2
CC to a Th1 response by inducing monocytic and other cells to produce Th1
CC cytokines. They can be used to treat pulmonary disorders having an
CC immunologic component, such as asthma or environmentally induced airway
CC disease. They can also be used to treat diseases associated with Gram-
CC positive bacterial infections or endotoxaemia including bacterial
CC meningitis, neonatal sepsis, cystic fibrosis, inflammatory bowel disease
CC and liver cirrhosis, Gram-negative pneumonia, Gram-negative abdominal
CC abscess, haemorrhagic shock, disseminated intravascular coagulation, or
CC an inflammatory response to lipopolysaccharide

Use of neutralising CpG and stimulating CpG motifs in DNA vectors - for
PT enhancing the immunostimulatory effect of an antigen or enhancing the
PT expression of a therapeutic polypeptide.
XX
PS Example 1; Page 64; 109pp; English.
XX
AAV74337-V74253 are oligodeoxynucleotide (ODN) primers used to describe a
CC method for enhancing the immunostimulatory effect of an antigen encoded
CC by nucleic acid contained in a nucleic acid construct. The method
CC involves determining the CpG-N and CpG-S motifs present in the construct,
CC removing neutralising CpG (CpG-N) motifs and optionally inserting a
CC stimulatory CpG (CpG-S) motifs in the construct, thereby producing a
CC nucleic acid construct having enhanced immunostimulatory efficacy. The
CC method can be used for immunisation against viral antigens, e.g. from
CC hepatitis B virus (HBV), bacterial antigens or an antigen derived from a
CC parasite. They can also be used for expression of a therapeutic
CC polypeptide, e.g. growth factors, toxins, tumour suppressors, cytokines,
CC apoptotic proteins, interferons, hormones, clotting factors, ligands and
CC receptors. (Updated on 20-MAR-2003 to correct PA field.)

PT Inhibiting angiogenesis in a subject, involves administering at least one  
PT antiangiogenic nucleic acid molecule to the subject.  
XX  
PS Claim 2; Page 23; 276pp; English.  
XX  
CC The invention relates to inhibiting angiogenesis in a subject, comprising  
CC administering at least one antiangiogenic nucleic acid molecule. Also  
CC included is a kit comprising a first container housing the antiangiogenic  
CC nucleic acids, and instructions for administering them to a subject  
CC having a condition characterised by unwanted angiogenesis. The method is  
CC useful for inhibiting angiogenesis associated with solid tumour growth,  
CC tumour metastasis, precancerous lesion, rheumatoid arthritis, psoriasis,  
CC diabetic retinopathy, retinopathy of prematurity, macular degeneration,  
CC corneal graft rejection, neovascular glaucoma, retrolental fibroplasia,

XX Pharmaceutical composition for treatment of anemia, thrombocytopenia and  
PT neutropenia comprises an immunostimulatory nucleic acid and a medicament  
PT for the respective disease.  
XX Claim 18; Page 9; 27pp; English.

XX The invention discloses a pharmaceutical composition comprising an  
CC immunostimulatory nucleic acid and either an anaemia medicament,  
CC thrombocytopenia medicament or a neutropenia medicament formulated in a  
CC carrier. The immunostimulatory nucleic acid can be selected from a  
CC methylated CpG nucleic acid, a T-rich nucleic acid, a poly-G nucleic acid  
CC and/or a nucleic acid having a phosphorothioate backbone. The  
CC compositions can be used for the treatment or prevention of anaemia,  
CC thrombocytopenia and neutropenia in a subject preparing to undergo  
CC chemotherapy or radiation treatment, and has received at least one dose of  
CC chemotherapy or radiation treatment. The treatment is required due to the  
CC effect of stress, including chemotherapy, on the formation of red blood  
CC cells, haematopoiesis. The composition provides a synergistic effect  
CC which permits a lower dose of the medicament to be used, thus providing  
CC lower costs associated with using lower doses of the medicament, and  
CC reduced chances of inducing side effects. The efficacy of the combination  
CC is profoundly improved over the use of each of the medicaments alone. The  
CC sequences presented in ABX75990-ABX76123 are the immunostimulatory  
CC nucleic acids disclosed in the invention

XX Treatment of a subject having, or at risk of developing cancer, involves  
PT the use of an immunostimulatory nucleic acid having a modified backbone  
PT in combination with a cancer medicament.  
XX Disclosure; Page 7; 32pp; English.  
XX The invention describes a method of treating (T1) a subject having cancer  
CC involving administering an immunostimulatory nucleic acid (I) having  
CC modified backbone and a cancer medicament (M1) selected from

chemotherapeutic agent, immunotherapeutic agent, cancer vaccine or hormone therapy. The poly-G nucleic acid is not conjugated to (M1) and is free of CpG and T-rich motifs. The composition is for the treatment of cancer (e.g. bone cancer, brain and CNS cancer, connective tissue cancer, oesophageal cancer, eye cancer, Hodgkin's lymphoma, larynx cancer, oral cavity cancer, skin cancer, and testicular cancer), and for preventing allergic responses in those receiving blood transfusions. It is also useful for the treatment of fungal, bacterial, parasitic and viral infections. The combination of the immunostimulatory nucleic acids and the cancer medicament is synergistic. The combination allows for the administration of higher doses of cancer medicaments without as many side effects, and allows for the administration of lower, sub-therapeutic doses of either compound, but with higher efficacy than would otherwise be achieved using such low doses. The immunostimulatory nucleic acids function by enhancement of anti-body dependent cell cytotoxicity. This mechanism provides long lasting effects of nucleic acids, thus reducing dosing regimens, improving compliance and maintenance therapy, reducing emergency situations and improving quality of life. This sequence represents an immunostimulatory nucleic acid used in the method of treating cancer described in the invention

Prevention or treatment of gastric ulcer involves administering nucleic acid.  
Disclosure; Page 14; 45pp; English.

The invention relates to a method of prevention or treatment of gastric ulcer comprising administering a nucleic acid to a subject in need for treatment of gastric ulcer. A nucleic acid sample comprising oligonucleotide 2006 was administered to a mouse model by an oral route or a vehicle control. Colonisation of mice by Helicobacter pylori was assessed at time points from 1 day to 1 month after treatment. The

ability of the nucleic acid to reduce H. pylori colonisation was assessed. The method is useful for preventing or treating a gastric ulcer on a subject e.g. human or non-human vertebrate animal including dog, cat, horse (equine gastric ulcer syndrome, EGUS), cow, goat, sheep, pig, rabbit, turkey, chicken, primate, rat and mouse. The method effectively treats or prevents gastric ulcers. The present sequence represents an immunostimulatory nucleic acid for the treatment of gastric ulcers

New compositions comprising an immunostimulatory nucleic acid and an oil-in-water emulsion, useful for reducing viral shedding or tissue damage upon vaccination, or for inducing an immune response against infectious diseases.

Claim 34; Page 35; 68pp; English.

The invention relates to a composition comprising an immunostimulatory nucleic acid (especially a CpG dinucleotide containing oligonucleotide) and an oil-in-water emulsion. Also included are reducing viral shedding in a non-human animal (by administering to a non-human animal infected with a virus or at risk of viral infection, an immunostimulatory nucleic acid and an oil-in-water emulsion), reducing tissue damage upon vaccination of a subject by administering to a subject by an invasive route an adjuvanted vaccine and an immunostimulatory nucleic acid to reduce tissue damage arising from the adjuvanted vaccine, where the vaccine is adjuvanted with an oil-in-water emulsion), inducing an immune response (by administering to a subject an oil-in-water emulsion and a

CC CpG oligonucleotide to produce the immune response) and reducing a dosage  
 CC of antigen administered to a subject to produce an antigen specific  
 CC immune response comprising administering to a subject an antigen in a sub  
 CC -therapeutic dosage and an immunostimulatory nucleic acid. The  
 CC composition is useful for reducing viral shedding in a non-human animal  
 CC infected with a virus or at risk of viral infection, for reducing tissue  
 CC damage upon vaccination, for inducing an immune response to treat or  
 CC prevent infectious diseases, for reducing a dosage of antigen  
 CC administered to a subject to produce an antigen specific immune response,  
 CC and for treating or preventing cancer (e.g. bone cancer, brain and CNS  
 CC (central nervous system) cancer, connective tissue cancer, esophageal  
 CC cancer, eye cancer, Hodgkin's lymphoma, larynx cancer, oral cavity  
 CC cancer, skin cancer, or testicular cancer), bacterial (e.g. meningitis),  
 CC viral (e.g. HIV infection leading to AIDS) and fungal (e.g. candidiasis)  
 CC infections. The present sequence is an immunostimulatory oligonucleotide  
 CC of the invention

XX Treating non-allergic inflammatory diseases, such as psoriasis, eczema,  
 PT allergic contact dermatitis, latex dermatitis or inflammatory bowel  
 PT disease by administering an immunostimulatory nucleic acid.

XX Disclosure; Page 15; 229pp; English.

XX The invention describes a method of treating non-allergic inflammatory  
 CC disease comprising administering to a subject having or at risk of  
 CC developing a non-allergic inflammatory disease an immunostimulatory  
 CC nucleic acid for prevention or treatment of the disease. The method is  
 CC useful for treating non-allergic inflammatory diseases, such as  
 CC psoriasis, eczema, allergic contact dermatitis, latex dermatitis or  
 CC inflammatory bowel disease e.g., ulcerative colitis or Crohn's disease.

 XX New oligonucleotides, useful in treatment and diagnosis of e.g. tumors,  
 PT inhibit expression of six specific genes, e.g. the oncogene WNT-7B, by  
 PT RNA interference.  
 XX  
 PS Claim 9; Page 45; 75pp; English.  
 XX  
 CC This invention relates to novel antisense oligonucleotides that modulate  
 CC the expression of WNT-7B, N-acetylglucosaminyltransferase, the voltage-  
 CC gated potassium channel, ion transport, Map3K8 or thymidine kinase.  
 CC Specifically, the invention describes inhibiting cell proliferation by  
 CC modulating the function of oncology targets: H-Ras, WNT-7B and  
 CC acetylglucosaminyltransferase. Small interfering RNA (siRNA) along with  
 CC the antisense compounds specifically hybridize to the target nucleic acid  
 CC molecules to inhibit gene expression. The Wnt proteins are secreted  
 CC ligands involved in embryogenesis and carcinogenesis, such that these  
 CC antisense oligos are useful for treating breast, gastric and colon  
 CC cancers. N-acetylglucosaminyltransferases are associated with tumour  
 CC progression, cell migration and matrix invasion, while Map3K8 regulates  
 CC cell differentiation and stress responses, such that antisense inhibitors  
 CC are cytostatic and antiinflammatory, and can be useful in cell  
 CC proliferative disorders. The voltage gated K channel maintains membrane  
 CC potential and modulates electrical excitability in neurons and can be  
 CC useful in the treatment of cardiac arrhythmias and neurological disorders  
 CC such as epilepsy. Thymidine kinase is important in DNA synthesis, and  
 CC antisense compounds can treat cell proliferation and modulate the  
 CC expression of interleukin 1b (IL-1b). Furthermore, antisense  
 CC oligonucleotides of the invention were designed to target H-ras and  
 CC interleukin 8 to inhibit their expression. This oligonucleotide sequence  
 CC is the CG50249-01-AS3 oligo used to inhibit expression of the voltage  
 CC gated potassium channel, in an exemplification of the invention.

 XX Preparing a DNA molecule comprises attaching an adaptor having at least  
 PT one known sequence and a nonblocked 3' end to the ends of the modified  
 PT DNA fragments to produce adaptor-linked fragments.  
 PT  
 XX  
 XX Disclosure; SEQ ID NO 55; 205pp; English.  
 PS  
 XX The invention relates to a method of preparing a DNA molecule by  
 CC attaching an adaptor having at least one known sequence and a nonblocked  
 CC 3' end to the ends of the modified DNA fragments to produce adaptor-  
 CC linked fragments, where the 5' end of the modified DNA is attached to the  
 CC nonblocked 3' end of the adaptor, leaving a nick site between the  
 CC juxtaposed 3' end of the DNA and a 5' end of the adaptor. The method  
 CC comprises: (a) obtaining at least one DNA molecule; (b) randomly  
 CC fragmenting the DNA molecule to produce DNA fragments; (c) modifying the  
 CC ends of the DNA fragments to provide attachable ends; (d) attaching an  
 CC adaptor having at least one known sequence and a nonblocked 3' end to  
 CC the ends of the modified DNA fragments to produce adaptor-linked  
 CC fragments, where the 5' end of the modified DNA is attached to the  
 CC nonblocked 3' end of the adaptor, leaving a nick site between the  
 CC juxtaposed 3' end of the DNA and a 5' end of the adaptor; (e) extending  
 CC the 3' end of the modified DNA from the nick site; and (f) amplifying  
 CC the adaptor-linked fragments. This sequence corresponds to an  
 CC oligonucleotide used in the method of the invention.

 XX Inducing immune response in subject useful for preventing and/or treating  
 PT viral infection e.g., human papilloma virus infection, involves topically  
 PT administering oil-in-water emulsion and immunostimulatory nucleic acid,  
 PT to subject.  
 XX  
 XX Claim 18; SEQ ID NO 133; 188pp; English.  
 PS  
 XX This invention relates to a novel method of inducing an immune response,  
 CC which involves topically administering to a subject an oil-in-water  
 CC emulsion and an immunostimulatory nucleic acid to induce an immune  
 CC response. The invention may be useful for the production of compounds  
 CC with a cytostatic, antibacterial, virucide, fungicide, antiparasitic,  
 CC dermatological, antipsoriatic, antiallergic, antimalarial, hepatotropic,  
 CC antiinflammatory, immunosuppressive, antitachmatic, gastrointestinal-Gen  
 CC or antitumor activity. The method is useful for inducing an immune  
 CC response in a subject having cancer or an infectious disease, or at risk  
 CC of developing an infectious disease such as bacterial infection, fungal  
 CC infection or viral infection, where the subject is an immunocompromised  
 CC subject. The cancer is chosen from melanoma, basal cell carcinoma and  
 CC cervical cancer. The subject has or is at risk of developing a condition  
 CC chosen from contact dermatitis, eczema, psoriasis, atopic dermatitis,  
 CC allergic contact dermatitis and latex dermatitis. The oil-in-water  
 CC emulsion and immunostimulatory nucleic acid of the invention is useful  
 CC for treating a subject having oesophageal cancer, eye cancer, larynx  
 CC cancer, oral cavity cancer, skin cancer, ovarian cancer and testicular  
 CC cancer, parasitic infection caused by parasites such as Leishmania  
 CC donovani, or Plasmodium falciparum, P malariae or P vivax causing  
 CC malaria, infection caused by Staphylococcus or Escherichia coli  
 CC infection, or viral infections caused by Hepatitis B virus or Hepatitis C  
 CC virus. The invention is useful in treating anaphylaxis, allergic rhinitis  
 CC or allergic asthma, inflammatory bowel disease, Crohn's disease and  
 CC ulcerative colitis. The invention is also useful for stimulating immune  
 CC responses, useful in the prevention and/or treatment of the above-  
 CC mentioned diseases. The oil-in-water emulsion and the immunostimulatory  
 CC nucleic acid of the invention is capable of inducing long lasting antigen  
 CC -specific responses. The present sequence is that of an immunostimulatory  
 CC oligonucleotide which may be used in the method of the invention.

 PT presence of polymorphic variations is indicative of the subject being at  
 PT risk of melanoma.  
 XX  
 PS Example 7; Page 114; 418pp; English.  
 XX  
 CC The invention relates to a novel method for identifying a subject at risk  
 CC of melanoma. The method comprises detecting the presence or absence of a  
 CC polymorphic variation associated with melanoma, where the presence of the  
 CC one or more polymorphic variations is indicative of the subject being at  
 CC risk of melanoma. The invention further comprises: a method for  
 CC identifying a polymorphic variation associated with melanoma proximal to  
 CC an incident polymorphic variation associated with melanoma; an isolated  
 CC nucleic acid which comprises a portion of or all of a nucleotide sequence  
 CC comprising fully defined 68400-213300 base pairs sequences (SEQ ID NO. 3,  
 CC 4, 5, 6, and/or 7) given in the specification, and comprises one or more  
 CC polymorphic variations; an oligonucleotide comprising a nucleotide  
 CC sequence complementary to a portion of the nucleotide sequence above,  
 CC where the 3' end of the oligonucleotide is adjacent to a polymorphic  
 CC variation; a microarray comprising the isolated nucleic acid linked to a  
 CC solid support; an isolated polypeptide encoded by the isolated nucleic  
 CC acid sequence; genotyping a nucleic acid; a method for identifying a  
 CC candidate molecule that modulates cell proliferation; treating melanoma  
 CC in a subject; and treating melanoma in a subject or preventing melanoma  
 CC in a subject. The methods and sequences have cytostatic activity. The  
 CC polynucleotides may be used in gene therapy. The methods are useful for  
 CC identifying a subject at risk of melanoma, treating melanoma in a  
 CC subject, or preventing melanoma in a subject. This polynucleotide  
 CC sequence represents a primer used in the exemplification of the  
 CC invention.

Cosmetic or pharmaceutical composition for treating epithelial covering  
tissue comprises superstructure-forming nucleic acid sequences.  
XX  
PS Disclosure; SEQ ID NO 3; 71pp; German.  
XX  
This invention represents a novel cosmetic or pharmaceutical composition  
for treating epithelial covering tissue which comprises superstructure-  
forming nucleic acid sequences. The composition can also be used in  
fabric softeners, hand-washing products, body and hair care products,  
hair dyes or manual dishwashing products. The superstructures are G  
quadruplexes, frayed wires or i motifs. The sequences are 30-40  
nucleotides long, have five or more C, G or I nucleotides in tandem, no  
CpG motifs, no nonmethylated CG dinucleotides, are polyI, polyC or polyG  
homopolymers and are optionally modified by replacing phosphodiester  
linkages with methylphosphonate, phosphoramidate, phosphorothioate or  
pentopyranoses or 3',5'-carboxylically bridged 2'-deoxyribose  
derivatives. The nucleic acid sequences are contained in liposomes. The  
composition of the invention inhibits the release of IL-8. The  
composition is useful for preventing or treating inflammatory changes to  
epithelial covering tissue, including changes caused by pathogens,  
CC autoimmune reactions, tumor necrosis factor, toxins and irritants,  
CC especially aging processes, psoriasis, atopic eczema, dry skin, alopecia  
areata, vitiligo, bullous diseases, rejection reactions, sunburn and

CC parodontosis. This sequence represents a phosphorothioate or  
CC phosphodiester oligonucleotide used to illustrate the method of the  
CC invention.

 PT Reagent for rapid deprotection of oligo:nucleotide(s) - and cleavage from  
 PT resin, contains linear alkylamine and opt. branched alkylamine to  
 PT suppress transamination side reaction.  
 XX  
 PS Example 2; Page 22; 58pp; English.

XX Deprotection of protected deoxyguanosine is the rate limiting step during  
 CC deprotection of synthetic oligonucleotides. This sequence was used to  
 CC study the rate of deprotection at a variety of temperatures between 25  
 CC and 80 deg. C. 100% of the nucleotides in this sequence are  
 CC deoxyguanosine. Other 21 mers comprising 25% and 50% deoxyguanosine  
 CC (AAQ50948, AAQ50949) were also used for analysis. The time for  
 CC deprotection at all temperatures was proportional to the amount of  
 CC protected deoxyguanosine in the oligonucleotide (Updated on 25-MAR-2003  
 CC to correct PN field.)

XX
XX Sequencing complex genomes, present as fragments in a cosmid library - by
PT sequencing end-specific nucleotides of each clone then correlating with
PT spatial relationship of cosmid, esp. for mammalian chromosomes.
XX
XX Example 4; Page 93; 128pp; English.
XX
XX Sequences were determined from the ends of chromosome 11-specific cosmids
CC by automated sequencing without intermediate subcloning. A sample of 371
CC DNA sequence fragments were determined and of these, 277 were suitable
CC for STS primer prediction by computer analysis (using the "Primer"
CC program available from E.Lander, MIT). The STSs and cosmids were mapped
CC by in situ hybridisation, somatic cell hybrid analysis or both. Using
CC this method, 370 STSs specific for human chromosome 11 were generated and
CC most of them were regionally mapped. This procedure illustrates a novel
CC method for sequencing complex genomes, designated "sequence sampled
CC mapping". The sequence sampled mapping method is useful for the
CC completion of high density sequence-based maps, and ultimately, for the
CC complete sequencing of genomic DNA directly from cosmid clones. See
CC AAQ82001-Q82706 and AAQ91325-Q91358 for STS primers. (Updated on 25-MAR-
CC 2003 to correct PN field.)

XX Disclosure; Fig 7; 605pp; English.
XX
XX This invention describes a novel method for identifying an inhibitor
CC potentially useful for treatment of cancer, where the inhibitor is active
CC on a gene vital for cell growth or viability, and where the gene is
CC subject to loss of heterozygosity (LOH) in a cancer. The inhibitor is
CC used for preventing the development of cancer in a patient having a
CC precancerous condition, by administering to the patient a first allele
CC specific inhibitor (ASI) targeted to an allele of a first essential gene
CC present in cells of the precancerous condition, where the normal somatic
CC cells of the patient are heterozygous for the first gene, the inhibitor
CC is active on at least one but less than all allelic forms of the gene
CC present in a population and targets only one allelic form present in the
CC normal somatic cells, and the first gene. The products and methods can be
CC used in the diagnosis, prevention and treatment of LOH disorders, e.g.
CC cancers, atherosclerotic plaques, premalignant metaplastic or dysplastic
CC lesions, benign tumours, endometriosis, polycystic kidney disease, and
CC graft versus host disease. The method can also be used to remove
CC malignant cells from bone marrow transplants. AAZ25812-226825 represent
CC human polymorphic sites described in the method of the invention

 PT Novel assay for identifying modulators of sterol-regulated Site-1

PT protease useful for the treatment of hypercholesterolemia, involves  
 PT identifying an agent capable of down regulating Site-1 protease activity.  
 XX  
 PS Example 4; Page 83; 172pp; English.  
 XX  
 CC The specification describes a method for identifying modulators of a  
 CC sterol-regulated Site-1 protease. Site-1 protease cleaves sterol  
 CC regulatory element binding proteins (SREBPs) in the endoplasmic  
 CC reticulum, initiating release from membranes and activating lipid  
 CC synthesis. The modulators therefore also modulate cholesterol and fatty  
 CC acid biosynthesis. The method comprises selecting an agent capable of  
 CC down regulating Site-1 protease and formulating a composition comprising  
 CC the agent. The site-1 protease inhibitors are useful for treating a  
 CC patient for elevated serum cholesterol. Diseases treated include  
 CC hypercholesterolemia and other lipid metabolism associated conditions.  
 CC PCR primers AAZ99602-03 were used to amplify cDNA encoding site-1  
 CC protease

CC The present sequence represents a prototypic blocking oligonucleotide,  
 CC which is used in the course of the invention. The specification describes  
 CC compositions comprising G-motif oligonucleotides. The G-motif  
 CC oligonucleotides inhibit activation of antigen presenting cells by  
 CC inhibiting the uptake of DNA by a cell, by stimulating natural killer  
 CC cells, or by co-stimulating cytotoxic T-lymphocytes. The G-motif  
 CC oligonucleotides may be used for the productions of vaccines for treating  
 CC septic shock, inflammation, autoimmune diseases (e.g. rheumatoid  
 CC arthritis, Crohn's disease, sarcoidosis, multiple sclerosis, Kawasaki  
 CC syndrome, graft-versus-host disease and transplant rejection), helper T  
 CC cell response 1-mediated diseases (e.g. Streptococcal induced arthritis,  
 CC Lyme arthritis, chronic inflammatory bowel disease, psoriasis vulgaris,  
 CC experimental allergic encephalomyelitis, and insulin-dependent diabetes  
 CC mellitus), bacterial infections, parasitic infections (e.g. Leishmaniasis  
 CC or Toxoplasmosis), viral infections (e.g. Cytomegalovirus and human  
 CC immunodeficiency virus (HIV)-infections), spontaneous abortions and  
 CC tumours. They may also be used to induce proliferation of bone marrow  
 CC cells, especially macrophage precursor cells

 PT spectrometry analysis and/or sequencing useful for determining DNA  
 PT nucleotide sequence and for determining polymorphisms.  
 XX  
 XX Example; Page 17; 36pp; English.  
 PS  
 XX The present invention relates to a new method of matrix-assisted laser  
 CC desorption/ionisation time-of-flight mass spectrometry (MALDI-TOF-MS)  
 CC analysis and/or sequencing of oligoribonucleotides. The method involves

CC using a modified ribonucleotide which is alpha-phosphorothioated and  
 CC having an electronegative substituent or arabino group at position 2' of  
 CC the ribose, and as nitrogenous base adenine, guanine, cytosine, uracil  
 CC and/or its derivatives. The method of the invention is useful for  
 CC determining the DNA nucleotide sequence and polymorphisms using MALDI-TOF  
 CC MS. The invention is also useful for analysing and/or sequencing a DNA  
 CC template or an RNA transcription product and/or for determining  
 CC polymorphisms by MALDI-TOF-MS. The present nucleic acid sequence  
 CC represents one of a collection (ABK87611-ABK87622) of MALDI-TOF-MS  
 CC analysis method associated oligonucleotides that were used in the methods  
 CC of the invention

 PT Novel replicase complex comprising hepatitis C virus NS5B replicase, a 3  
 PT nucleotide-long template to which a 2 nucleotide-long primer is annealed,  
 PT and template and primer which do not form a stable duplex in the absence  
 PT of HCV NS5B.  
 XX  
 XX Example; Page 6; 17pp; English.  
 PS  
 XX The invention relates to a replicase complex comprising a hepatitis C  
 CC virus (HCV) NS5B replicase protein, a linear nucleic acid template and a  
 CC complementary nucleic acid primer which is annealed to the 3' terminus of  
 CC the template, where the template is at least three nucleotides and the  
 CC primer is two or three nucleotides, and the template and primer do not  
 CC form a stable duplex in solution in the absence of the HCV NS5B protein.  
 CC The complex is useful for detecting HCV replicase activity and permits  
 CC establishment of sensitive RNA-dependent RNA polymerase assays to screen  
 CC and evaluate antiviral inhibitors and to improve the specificity and  
 CC efficacy of the inhibitors. The complex is also useful in the development  
 CC of a reliable system for determining kinetic and thermodynamic constants  
 CC of HCV NS5B-catalysed nucleotide incorporation and investigation of  
 CC mechanistic inhibitors for mis-incorporation or chain termination.

XX
XX Small interfering double-stranded RNA which suppresses expression of
PT Huntington gene and having homologous sequence to Huntington mRNA
PT transcribed from specific base sequence of gene, useful for treating
PT Huntington's disease.
XX
XX Example 1; SEQ ID NO 7; 45pp; Japanese.
XX
XX The invention relates to a small interfering double-stranded RNA (siRNA)
CC with a sense and antisense strand, that is homologous to Huntington mRNA,
CC and capable of targeting Huntington mRNA to suppress the expression of
CC the Huntington gene. Also disclosed is the method for inhibiting
CC Huntington gene expression using the siRNA described above, and a drug
CC for preventing and/or treating Huntington's disease. The siRNA is
CC targeted to a specific mRNA sequence located in a region in the upstream
CC vicinity of the CAG repeat of exon 1 of the Huntington gene. The siRNA
CC has sense and antisense strands which are synthetically manufactured or
CC produced using gene recombinant techniques. The sense and antisense
CC strands produced using gene recombinant techniques are integrated into an
CC expression vector as DNA which transfers the RNA to a host cell. The
CC siRNA specifically and efficiently suppresses the expression of the
CC Huntington gene. This sequence represents a sense strand of a siRNA of
CC the invention.

XX
XX Determining the presence of genetic element(s), e.g. nucleotide
XX repeat(s), or marker(s) for microbial typing, in a nucleic acid sample,
XX useful in diagnostic methods, by performing a ligation reaction and
XX detecting a ligation by-product.
XX
XX Disclosure; SEQ ID NO 8; 53pp; English.
XX
XX The present invention relates to estimating the number of nucleotide
XX repeats and determining the presence of other genetic element(s), such as
XX marker(s) for microbial typing, by ligating the oligonucleotide(s)
XX annealed to the nucleic acid sample to each other using a ligase enzyme
XX and detecting a ligation-by-product to determine whether a ligation
XX reaction has occurred. Specifically, analyzing the number of repeats in a
XX sample comprises providing a nucleic acid sample potentially comprising a
XX repeat; providing oligonucleotide(s) complementary to the repeat;
XX annealing the oligonucleotide(s); ligating the oligonucleotide(s)
XX annealed to the nucleic acid sample to each other using a ligase enzyme;
XX converting a ligation by-product into ATP; and detecting the ATP by a
XX luciferase-based assay to determine whether a ligation reaction has
XX occurred. One of the oligonucleotides is adapted to anneal immediately
XX outside the repeated sequence. The oligonucleotide employed is a mono-,
XX di- or multimer of the repeat in itself. The oligonucleotides are
XX complementary to, but that are out of phase with, the repeat. Unannealed
XX oligonucleotides are removed after the detection by using an exonuclease,
XX and are inactivated after the detection by using a phosphatase.
XX Oligonucleotides are complementary to a genetic region, optionally with
XX an AdoPP5' modification, that is informative for identification of
XX microbial species, from the following groups: 16S rRNA gene, 23S rRNA
XX gene, groEL, gyrB, rpoB, rnpB and groEL, microsatellite and
XX minisatellite, VNTRs, the nuclear ribosomal DNA (rDNA) array - small-
XX subunit (SSU) (18S-like), large-subunit (LSU) (23S, 26S, or 28S-like),
XX 5.8S rRNA genes, and internal transcribed ribosomal DNA (rDNA) spacers
XX (ITS1 and ITS2). The method is useful in diagnosing dentatorubral
XX pallidolysian atrophy (DRPLA), Fragile X syndrome, Fragile site FRAXE,
XX Huntington's disease, Kennedy's disease, Machado-Joseph disease, Myotonic
XX dystrophy, Friedrich's ataxia, and spinocerebellar ataxia. The present
XX sequence is a variant 4b oligonucleotide for detection of CGG repeats
XX useful for detection of fragile X syndrome.

XX Oligonucleotides, useful for the modulation of Smad6 expression in the
XX treatment or prophylaxis of e.g. cardiovascular disease, are targeted to
XX nucleic acid molecule encoding Smad6.
XX Claim 3; Page 90; 110pp; English.
XX The invention relates to an antisense oligonucleotide targetted to a
XX nucleic acid molecule encoding human Smad6 protein, which specifically
XX hybridises with the nucleic acid and inhibits its expression. Antisense
XX compounds of the invention are used for inhibiting the expression of
XX Smad6 in cells and tissues in the treatment of a disease or condition
XX associated with Smad6 such as cardiovascular disease, cancer, infection
XX and inflammation. They are also useful in the diagnostics, as research
XX reagents, in kits and in antisense therapy. The present sequence is an
XX antisense oligonucleotide targetted to human Smad6

XX New gene (BNO1) mapping to chromosome 16q24.3, useful in gene therapy,
XX e.g. for diagnosing or treating cancers (e.g. lymphoma),
XX immune/inflammatory diseases (e.g. AIDS) or neurological disorders (e.g.
XX Parkinson's disease).
XX Example 8; Page 63; 85pp; English.
XX The invention relates to the human and murine BNO1 proteins and nucleic
XX acids encoding them. The BNO1 protein is a member of the FBXO class of F-
XX box proteins, containing an F-box motif but no other known protein-
XX interaction domains. Proteins which contain F-boxes are the substrate
XX recognition components of SCF ubiquitin-E3 ligases, which are responsible
XX for ubiquitinating proteins, thereby targeting them for degradation in
XX the proteasome. In addition, BNO1 is able to interact with Skp1, an
XX essential component of SCF ubiquitin-E3 ligases, suggesting that it plays
XX a role in the ubiquitin-proteasome degradation system that is involved in
XX the regulation of many proteins, particularly those involved in important
XX cellular processes such as cell cycle regulation. The human BNO1 gene
XX maps to chromosome 16q24.3, and is expressed as two different isoforms.
XX Isoform 1 consists of 539 amino acids and is encoded by an open reading
XX frame (ORF) of 1617 bp, while the longer isoform 2 consists of 568 amino
XX acids encoded by an ORF of 1704 bp. The mRNAs encoding the 2 human BNO1
XX isoforms are the product of differential splicing: both comprise exons 1-
XX 9, but the isoform 2 mRNA additionally comprises exon 2.5. Loss of
XX heterozygosity (LOH) of the long arm of chromosome 16, in which the human
XX BNO1 gene is situated, is implicated in breast and prostate cancer, and
XX BNO1 expression is also downregulated in these cancers. BNO1 nucleic
XX acids, proteins and compounds which modulate BNO1 activity or expression
XX may be used for treating disorders associated with altered BNO1 activity
XX or expression. Such disorders include cancers (e.g., breast, prostate,
XX liver and ovarian cancers), immune/inflammatory diseases (e.g., AIDS
XX (acquired immunodeficiency syndrome), asthma, Crohn's disease or multiple
XX sclerosis) or neurological disorders (e.g., Parkinson's disease or
XX Alzheimer's disease). BNO1 nucleic acids, proteins and antibodies may
XX also be used to diagnose or prognose disorders associated with BNO1
XX dysfunction, or a predisposition to these disorders. Additionally, BNO1
XX nucleic acids and proteins, and transgenic animals comprising human BNO1
XX nucleic acid sequences or in which BNO1 gene function has been knocked
XX out are useful in screening potential drugs for treating BNO1-associated
XX disorders, and the human BNO1 protein isoforms are particularly useful
XX for identifying BNO1-specific protein substrates that are targeted for
XX degradation by ubiquitination. Sequences ABQ94326-ABQ94349 represent
XX human BNO1 gene-specific PCR primers used in SSCP (single-strand
XX conformation polymorphism) analysis of tumours and cell lines for BNO1
XX mutations in an exemplification of the invention

XX
PS Disclosure; Page 29; 99pp; English.
XX
CC The present invention describes a method for inhibiting the expression of
CC a gene in a cell comprising contacting the cell with an effective
CC synergistic amount of an antisense oligonucleotide which inhibits
CC expression of the gene, and an effective synergistic amount of a protein
CC effector of a product of the gene. Also described are: (1) a method for
CC treating a disease responsive to inhibition of a gene in a mammal; (2) a
CC method for inhibiting tumour growth in mammal; (3) an inhibitor of a gene
CC comprising an antisense oligonucleotide which inhibits expression of the
CC gene in operable association with a protein effector of a gene product;
CC and (4) a pharmaceutical composition comprising the inhibitor of (3). The
CC methods and compositions are useful as analytical tools for transgenic
CC studies and as therapeutic tools, e.g. as gene therapy tools for human
CC diseases including benign and malignant tumours, inflammation or asthma.
CC The methods, inhibitors and compositions of the invention that inhibit
CC expression or activity of a gene or gene product may be used to treat
CC patients having, or predisposed to developing, a disease responsive to
CC inhibition of the gene. These may also be used to activate silenced genes
CC to provide missing gene functions and improve a given condition.
CC Furthermore, the methods and compositions are useful as probes of the
CC physiological function of a gene product in an experimental cell culture
CC or animal system; and to evaluate the effect of inhibiting gene activity
CC or expression. AAA55758 to AAA55842 represent oligonucleotide sequences
CC which are used in the exemplification of the present invention

XX Detecting, grading and/or monitoring a Helicobacter pylori infection by  
PT detecting a high-integrity H. pylori nucleic acid in a patient sample.  
XX  
XX Example 5; Page 27; 28pp; English.  
XX  
XX The sequences given in ABA00075 and ABA00083-85 are probes and primers  
CC which were used in the detection of H. pylori infection pre- and post-  
CC treatment in a patient, compared to the presence of human DNA. These  
CC sequences may be used in the method of the invention for detecting a H.  
CC pylori infection. The method comprises: (a) determining an integrity of a  
CC Helicobacter pylori nucleic acid present; or (b) amplifying and detecting  
CC Helicobacter pylori nucleic acid at least 200,  
CC a first, second or third Helicobacter pylori nucleic acid identified with an  
CC 400 or 600 in length, respectively, where a patient is identified with an  
CC infection if the integrity of the nucleic acid exceeds a predetermined  
CC threshold, or if the amplified first, second or third Helicobacter pylori  
CC nucleic acids are detected. The method is useful for detecting a  
CC Helicobacter pylori infection, determining its status, monitoring  
CC progression, evaluating efficacy of a treatment and diagnosing gastric

CC disease by detecting a high-integrity *Helicobacter pylori* nucleic acid in  
 CC a patient sample. Prior methods of using polymerase chain reaction (PCR)  
 CC in assays detecting *H. pylori* infection usually lack the specificity to  
 CC distinguish a successfully treated patient from a patient with a  
 CC continuing *H. pylori* infection. The present invention of non-invasive  
 CC method uses more sensitive and more specific assays to test for and to  
 CC monitor *H. pylori* infection and course of treatment

 XX  
 PS Claim 15; SEQ ID NO 2975; 763pp; English.  
 XX  
 CC This invention describes a novel composition (a) a first active agent,  
 CC comprising oligonucleotides, effective for alleviating  
 CC bronchoconstriction, respiratory tract inflammation, allergies and  
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,  
 CC surfactant depletion or hyposecretion, when administered to a mammal. The  
 CC oligonucleotides are derived from a gene encoding or regulating  
 CC expression of a target polypeptide associated with lung airway or lung  
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.  
 CC The invention also describes a kit, that comprises: (a) a delivery  
 CC device, in separate containers, (b) the oligonucleotides, (c)  
 CC instructions for adding a carrier and for use of the kit. The composition

CC of the invention has antiallergic, antiinflammatory, antiasthmatic,  
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a  
 CC beta-adrenergic agonist. The composition is useful for preventing or  
 CC treating a respiratory, lung or malignant disease. The administered  
 CC composition comprises oligo and is administered to reduce the production  
 CC or availability, or to increase the degradation of the target mRNA or to  
 CC reduce the amount of target polypeptide present in the lungs. The  
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung  
 CC inflammation, allergies and/or surfactant hypoproduction are associated  
 CC with a disease or condition such as pulmonary vasoconstriction,  
 CC inflammation, allergies, asthma, impeded respiration, respiratory  
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary  
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary  
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.  
 CC The reduced adenosine content of the anti-sense oligos corresponding to  
 CC thymidines present in the target RNA serves to prevent the breakdown of  
 CC the oligonucleotides into products that free adenosine into the system  
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to  
 CC prevent any unwanted effects due to it

PT Novel antisense compound targeted to nucleic acids encoding human or
PT mouse CCAAT/enhancer binding protein (C/EBP) beta, useful in vitro for
PT inhibiting expression of human or mouse C/EBP beta in cells/tissues.
XX
XX
PS Example 17; Col 49-50; 69pp; English.
XX
XX
CC Sequences ABL94252-ABL94476 represent antisense oligonucleotides targeted
CC to the human or mouse CCAAT/enhancer-binding protein alpha (C/EBP alpha)
CC gene, which inhibit its expression. The antisense oligonucleotides were
CC designed to target different regions of the human and/or mouse C/EBP
CC alpha RNA, and were analysed for their effect on C/EBP alpha mRNA levels
CC by quantitative real-time PCR. The C/EBP family of proteins are a family
CC of transcription factors which regulate the expression of a wide range of
CC genes that control normal tissue development, cellular function, cellular
CC proliferation and functional differentiation. C/EBP beta (also known as
CC C/EBP2, LAP, TCF5, CRP2, NFIL6, IL6BP, NF-M, AGP/EBP and Apc/EBP)
CC primarily regulates homeostasis and oxidative stress responses
CC and is a mediator of IL-6 (interleukin-6) signalling. C/EBP beta is
CC thought to be involved in carbohydrate metabolism, immunity, the Th1
CC response, female fertility and gluconeogenic pathways. C/EBP beta is
CC expressed in the liver, lung, spleen, kidney, brain, and testis, with the
CC highest expression found in the lung. It is also expressed at a higher
CC level in malignant ovarian tissue compared with normal ovarian tissue,
CC and its expression in pancreas is upregulated in response to chronically
CC elevated levels of glucose, indicating that it is involved in the
CC impairment of insulin secretion in type II diabetes. The oligonucleotides
CC of the invention are useful for diagnosis, prevention and treatment of
CC conditions associated with C/EBP beta expression, such as cancer
CC (particularly ovarian cancer), tumour formation, diabetes (particularly
CC type II diabetes), infection, or inflammation

XX New antisense oligonucleotides targeted to nucleic acid encoding casein
PT kinase 2-alpha prime, useful for diagnosing and/or treating a disease or
PT condition associated with expression of casein kinase 2-alpha prime.
XX
XX Claim 3; Page 96; 129pp; English.
XX
XX The present invention relates to antisense oligonucleotides and methods
CC for modulating the expression of human or mouse casein kinase 2-alpha
CC prime. The antisense oligonucleotides are useful for inhibiting the
CC expression of casein kinase 2-alpha prime, and for treating diseases or
CC conditions associated with aberrant expression of casein kinase 2-alpha
CC prime. Such diseases include diabetes mellitus, and hyperproliferative
CC disorders (particularly cancers e.g. breast cancer, prostate cancer, or
CC liver cancer). The antisense compounds are also useful for diagnostics,
CC therapeutics, prophylaxis, e.g. to prevent or delay infection,
CC inflammation or tumour formation, as research reagents and kits, and in
CC distinguishing between functions of various members of a biological
CC pathway. ABS67840-ABS67917 represent human or mouse casein kinase 2-alpha
CC prime antisense oligonucleotides which comprise a phosphorothioate
CC backbone

 XX  
 XX Pharmaceutical composition for treating ailments associated with impaired  
 PT respiration, has oligo(s) antisense to specific gene(s) or its  
 PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or  
 PT ubiquinone.  
 XX  
 XX Disclosure; SEQ ID NO 2975; 872pp; English.  
 XX  
 XX The invention relates to a novel pharmaceutical composition, which has a  
 CC first active agent comprising an oligonucleotide antisense to the  
 CC initiation codon, coding region, 5' or 3' end genomic flanking regions,  
 CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of  
 CC junctions of genes encoding a polypeptide associated with lung and/or  
 CC nasal airway dysfunction and a second active agent comprising an  
 CC antiinflammatory steroid and ubiquinone. A composition of the invention  
 CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,  
 CC immunosuppressive, and cytostatic activity. The composition may have a  
 CC use in antisense gene therapy. The composition is useful for treating or  
 CC preventing a respiratory, lung or malignant disease or condition, also  
 CC for enhancing the prophylactic or therapeutic respiratory effect of an  
 CC antiinflammatory steroid in a subject, for reducing or depleting levels  
 CC of, or reducing sensitivity to adenosine, reducing levels of adenosine  
 CC receptor, producing bronchodilation, increasing levels of ubiquinone or  
 CC lung surfactant in a subject's tissue, or treating bronchoconstriction,  
 CC lung inflammation, lung allergies, or a respiratory disease or condition.  
 CC Note: The sequence data for this patent is not represented in the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences

 PT Detecting a variant in a primer extension assay, useful for analyzing

PT molecular events for identifying mutations indicative of cancer, by  
 PT contacting a target nucleic acid primer complementary to a region of the  
 PT target nucleic acid.  
 XX  
 XX Example 5; SEQ ID NO 35; 54pp; English.  
 XX  
 CC The invention relates to a novel method for detecting a variant in a  
 CC primer extension assay, useful for analysing molecular events for  
 CC identifying mutations indicative of cancer, by contacting a target  
 CC nucleic acid primer complementary to a region of the target nucleic acid.  
 CC Detecting a variant in a primer extension assay comprises contacting a  
 CC target nucleic acid primer complementary to a region of the target  
 CC nucleic acid, and extending the primer in the presence of a first  
 CC nucleotide that is complementary to a first variant nucleotide suspected  
 CC to be at a position downstream of the region and a second nucleotide that  
 CC is complementary to a second variant nucleotide at the position, thus to  
 CC reduce misincorporation of the first nucleotide on a template comprising  
 CC the second variant nucleotide. The methods are useful for analysing  
 CC molecular events for identifying individuals with mutations indicative of  
 CC cancer. They are particularly useful in detecting a rare mutation in a  
 CC heterogeneous biological sample (e.g. sporadic mutation in a  
 CC heterogeneous patient sample), detecting rare genotypes in genotyping  
 CC reactions (e.g. viral genotyping reactions), or detecting mutant or viral  
 CC sequences in pooled samples (e.g. detecting polymorphisms or inherited  
 CC sequence variations in pooled patient samples). This polynucleotide  
 CC sequence represents a primer used as part of the primer extension assay  
 CC of the invention.

PS

XX The invention relates to a novel method for acquiring an aptamer by  
 CC immobilising polynucleotides. The method comprises: having mutually  
 CC different base sequences on a substrate of micro arrays, contacting the  
 CC immobilised substrate with labelled target molecules, selecting a  
 CC polynucleotide having high bond strength with respect to the target  
 CC molecule, and immobilising polynucleotides obtained after subjecting the  
 CC base sequence of the polynucleotide selected in the above step to a  
 CC mutation. The method is useful for acquiring aptamers. The method is  
 CC useful for acquiring an aptamer such as a polynucleotide, which is useful  
 CC as a test reagent and therapeutic agent. The method is useful in  
 CC developing the aptamer that inhibits a virus protein. The method  
 CC efficiently and rapidly acquires an aptamer capable of binding to a  
 CC target molecule, by using a micro array. The polynucleotide is easily  
 CC loaded onto a chip and a polynucleotide (an aptamer), capable of binding  
 CC to a target molecule, is instantaneously assayed by using a micro array,  
 CC at low cost. This polynucleotide sequence represents an artificially  
 CC synthesised aptamer oligonucleotide used in the exemplification of the  
 CC invention.

PT HER2, K-Ras, H-Ras, N-Ras, and human deficiency virus sequences.
XX
PS Claim 58; Page 85; 185pp; English.
XX
CC The invention relates to a novel short interfering RNA (siRNA) nucleic
CC acid molecule or an enzymatic nucleic acid molecule, that modulates
CC expression of a nucleic acid molecule encoding HER2, K-Ras, H-Ras, N-Ras,
CC human immunodeficiency virus (HIV) or a component of HIV. The nucleic
CC acid molecule of the invention has cytostatic, anti-HIV, and anti-
CC rheumatic activity. The nucleic acid molecules are useful for reducing
CC HER2, K-Ras, H-Ras, and HIV activity in a cell. The nucleic acids are
CC also useful for treating breast, ovarian, colorectal, lung, prostate,
CC bladder, or pancreatic cancer, and HIV infection, and AIDS. The sequences
CC shown in ABZ59899 - ABZ62216, ABZ64544 - ABZ65531, ABZ66520 - ABZ66524,
CC ABZ66530 - ABZ66585 represent substrate/target sequences for the human
CC ribozymes of the invention

PS Disclosure; Page 4; 89pp; English.  
XX  
CC The present sequence is a PCR primer (nt 66-84) for the human  
CC steroidogenesis acute regulatory protein (hSTAR) cDNA. The hSTAR gene can  
CC be analysed for mutations to detect (e.g. prenatally) genetic defects  
CC associated with congenital lipid adrenal hyperplasia (CAH), or its  
CC transmission to children. CAH can be treated by protein or gene  
CC replacement therapy, which can also be used to prevent or treat  
CC hypercholesterolaemia. A human adrenal cortex cDNA library was screened  
CC with a mouse STAR probe to isolate a 1.6 Kb insert, including an ORF for  
CC a 285 residue protein. When it was cloned into pSPORT and expressed in  
CC COS-1 cells cotransfected with pP450scd and pADX, it increased the level  
CC of pregnenolone synthesis from cholesterol or 20-alpha-hydroxycholesterol

PS
XX
XX The invention relates to a novel short interfering nucleic acid (siNA)
CC that downregulates expression of the BCL2 gene by RNA interference. A
CC siNA of the invention has cytostatic, immunosuppressive, virucide, and
CC anti-HIV activity. The siNA are useful for modulation (inhibition) of
CC expression or activity of BCL2 by RNA interference. siNA are used to
CC modulate expression of BCL2 genes, in cells, tissue explants or
CC organisms, e.g. for treating cancer, autoimmune diseases and viral
CC infections (including by HIV) but also for drug screening, diagnosis,
CC target identification and validation, genetic engineering, (e.g. of single
CC pharmacogenomics, studying gene function and gene mapping, (e.g. of single
CC nucleotide polymorphisms)). The sequences shown in ADF49273-ADF50143
CC represent siNA of the invention.

XX  
XX New nucleic acids encoding mammalian K-Hnov potassium channel proteins,  
PT useful for the diagnosis and treatment of episodic ataxia with myokymia,  
PT cardiac arrhythmia, epilepsy and Bartter's syndrome.  
PT  
XX  
XX Example 1; Page 31; 112pp; English.  
XX  
XX This sequence represents a DNA encoding a pore domain from a human  
CC potassium channel and was used in the identification and isolation of  
CC human K-Hnov cDNAs (AAZ11897-211915). K-Hnov proteins have a high degree  
CC of homology to known potassium channels and may be alpha subunits, which  
CC form the functional channel, or accessory subunits that act to modulate  
CC the channel activity. K-Hnov cDNAs were isolated by extension of  
CC expressed sequence tags (ESTs) which were related but not identical to  
CC known human potassium channels. Potential polymorphisms detected as  
CC sequence variants between multiple independent clones. Potassium channels  
CC have critical roles in various cell types and biochemical pathways.  
CC Defective potassium channels are known to cause four human diseases:  
CC episodic ataxia with myokymia; cardiac arrhythmia (long QT syndrome);  
CC epilepsy; and Bartter's syndrome. As potassium channels are critical  
CC components of virtually all cells, it is likely that abnormal potassium  
CC channels are also implicated in certain renal, cardiovascular and central  
CC nervous system (CNS) disorders. Nucleotides encoding K-Hnov proteins may  
CC be used for identifying homologous or related proteins and the DNA  
CC sequences encoding them. They may be used to produce compositions that  
CC modulate the expression and function of the K-Hnov protein and in  
CC studying the biochemical pathways associated with it. They may also be  
CC used for the recombinant production of K-Hnov protein in fermentation  
CC cultures. Additionally, such nucleotides may be used in gene therapy  
CC protocols for the treatment of diseases associated with abnormal  
CC potassium channels

 PT resistance.  
 PT  
 XX  
 PS Claim 3; Fig 9; 69pp; English.  
 XX  
 CC The sequences given in AAQ51825-2266 represent areas of mRNAs which are  
 CC associated with development or maintenance of chronic myelogenous  
 CC leukemia (CML), promyelocytic leukemia, Burkitt's lymphoma, or acute  
 CC lymphocytic leukemia, follicular lymphoma, B-cell acute lymphocytic  
 CC leukemia, breast cancer, colon carcinoma, neuroblastoma and lung cancer.  
 CC The full length mRNAs containing these target sequences, encode aberrant  
 CC cellular proteins which are able to control cellular proliferation and  
 CC are directly linked to a leukemic phenotype. These target sequences are  
 CC identified by the ribozyme of the invention. The ribozymes are formed in a  
 CC hammerhead motif, but may also be formed in the motif of a hairpin,  
 CC hepatitis delta virus, group I intron or RNaseP-like RNA. These ribozymes  
 CC may be used to inhibit the development or expression of a transformed  
 CC phenotype in man and other animals by modulating expression of the  
 CC corresponding gene. Cleavage of target mRNAs expressed in pre-neoplastic  
 CC and transformed cells elicits inhibition of the transformed state.  
 CC Multiple drug resistance (mdr-1) mRNA specific ribozymes remove the  
 CC mechanism of drug resistance used by transformed cells and thus enhances  
 CC drug therapies for tumours. The ribozymes may also be used to study  
 CC genetic drift and mutations within cells. (Updated on 25-MAR-2003 to  
 CC correct PN field.)

 PT Selecting compounds useful for treating or preventing Alzheimer's  
 PT disease, from their ability to reduce levels of specific disease markers  
 PT in animal models.  
 PT  
 XX Example 5; Page 23; 36pp; English.  
 PS  
 XX The invention relates selecting compounds that reduce symptoms of  
 CC Alzheimer's disease using a non-human mammal that has been subjected to  
 CC cerebral ischaemia or lesion of a nerve so as to produce, in the affected  
 CC region, increased levels of specific markers of Alzheimer's disease-  
 CC associated inflammation. Test compounds are selected if they reduce  
 CC levels of these markers significantly, in the affected region, relative  
 CC to controls. The markers are interleukin-1beta (IL-1b), tumour necrosis  
 CC factoralpha (TNFalpha), macrophage inflammatory protein-1alpha (MIP-  
 CC 1alpha), glial fibrillar associated protein (GFAP), MHC (major  
 CC histocompatibility complex) Iialpha or II L, CD86, fractalkane or CX3CR1  
 CC (a receptor for fractalkane). The method is used to identify compounds  
 CC useful in treatment or prevention of Alzheimer's disease or other  
 CC neurodegenerative diseases that have an inflammatory component. The  
 CC method provides fast, accurate and quantitative drug screens. The present  
 CC sequence is a PCR primer used to determine the level of a transcript for  
 CC an efficacy marker in a transgenic mouse which overexpresses App and  
 CC displays Alzheimer's like neuropathology. The efficacy markers are VitD3-  
 CC 24OHase, MCP-1, IL-10, IL-12 p40, #1/#2, IFN-gamma #1/#2, CD3 epsilon,  
 CC CD4 #1/#2, IgG-1, Ig k (light chain)

XX  
XX The present invention describes a short interfering nucleic acid (siNA)  
CC that downregulates expression of a mitogen-activated protein kinase  
CC (MAPK) genes by RNA interference. Also described: (1) a method for  
CC modulating expression of MAPK genes in cells, tissue explants or  
CC organisms by introduction of siNA; (2) kits for in vitro or in vivo  
CC delivery of siNA; (3) conjugates and/or complexes of siNA; and (4)  
CC vectors that express siNA and cells containing these vectors. MAPK siNAs  
CC have cytostatic, anorectic, antidiabetic, antiinflammatory,  
CC antiasthmatic, immunosuppressive, antibacterial, antirheumatic,  
CC antiarthritic, antipsoriatic and gastrointestinal activities. The MAPK  
CC siNAs can be used to modulate the expression of MAPK genes, in cells,  
CC tissue explants or organisms, e.g. for treating obesity; diabetes types I  
CC and II; a wide range of tumours, and inflammatory diseases (asthma,  
CC septic shock, rheumatoid arthritis, psoriasis and inflammatory bowel  
CC disease). They can also be used for drug screening; diagnosis; target  
CC identification and validation; genetic engineering; pharmacogenomics;  
CC studying gene function and gene mapping (e.g. of single-nucleotide  
CC polymorphisms). The present sequence represents a MAPK siNA which is used  
CC in the exemplification of the present invention.

XX Novel short interfering RNA (siRNA) comprises sense and antisense RNA  
PT strands, useful for inhibiting expression of human vascular endothelial  
PT growth factor mRNA, for treating angiogenic disease, e.g. diabetic  
PT retinopathy and cancer.  
XX  
XX Disclosure; SEQ ID NO 43; 218pp; English.  
PS  
XX This invention relates to novel compositions that comprise short  
CC interfering RNA (siRNA) molecules, which can be used to inhibit  
CC angiogenesis. Specifically, it refers to siRNAs that target and cause  
CC RNAi-induced degradation of mRNA from human vascular endothelial growth  
CC factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain  
CC region) genes, as well as mutants derived thereof. The present invention  
CC describes sense and antisense RNA strands that form an RNA duplex and  
CC bind to the target mRNA, such that expression is inhibited and the target  
CC degraded. As such, siRNA administered in combination with a therapeutic  
CC agent is useful for treating diseases associated with angiogenesis and  
CC the overexpression of VEGF, which include diabetic retinopathy, age-  
CC related macular degeneration, inflammatory disease, psoriasis and  
CC rheumatoid arthritis. Furthermore, it can be used to treat various  
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.  
CC Accordingly, these compositions exhibit cytostatic, antiangiogenic,  
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and  
CC antiarthritic activities. This oligonucleotide is a human VEGF DNA oligo,  
CC a target for siRNA inhibition of the invention.

XX Preparation of bar code-type gene chip.  
PT Disclosure; Page 5; 7pp; Chinese.  
XX  
CC The invention relates to a preparation process for a bar code-type gene  
CC chip which involve fixing oligonucleotide segments with specific base  
CC sequence onto the surface of substrate in a microarray mode. The forward  
CC primer upstream sequence with mononucleotide site specificity to be  
CC detected is made to complement and pair with bar code, the middle is the  
CC limited enzyme incising site, and the downstream sequence is made to pair  
CC with the target sequence. There is a biotin or a fluorescent group marker  
CC in the 5'-end, and a nucleotide incapable of pairing with target sequence  
CC is introduced to the place of 1-4 nucleotides apart from the 3'-end  
CC upstream through PCR, purification, enzyme incising and hybrid elution  
CC with the bar code gene chip. The bar code base sequence has composition  
CC independent on target nucleic acid to be detected and has detected  
CC segment length within 30 nucleotides, and this reduces the cross  
CC hybridizing and error hybridizing. This sequence corresponds to an  
CC oligonucleotide sequence used in the invention.

XX  
CC The invention describes a chemically synthesized double stranded short  
CC interfering nucleic acid (siRNA) molecule (I) that directs cleavage of a N  
CC -RAS RNA via RNA interference (RNAi), where each strand of the siRNA  
CC molecule is 18-23 nucleotides in length, and one strand of the siRNA  
CC molecule comprises nucleotide sequence complementary to the N-RAS RNA for  
CC the siRNA molecule to direct cleavage of the N-RAS RNA via RNA  
CC interference. Also disclosed are an expression vector comprising a  
CC nucleic acid sequence encoding an siRNA molecule; and a mammalian cell  
CC comprising the expression vector. The siRNA molecule (I) is useful for  
CC modulating RAS gene expression. It is also useful for modulating the

CC expression and activity of other genes in the pathways of RAS. The siRNA  
CC molecule is also useful for diagnosing or treating diseases and  
CC conditions that respond to the modulation of RAS gene expression or  
CC activity, e.g. cancer or other proliferative diseases, disorders, or  
CC conditions. This sequence represents a human K-Ras 2 siRNA target  
CC sequence for gene silencing by RNA interference.

XX
XX New chemically synthesized double stranded short interfering nucleic acid
XX having complementarity to TRPM7 RNA to direct cleavage of TRPM7 RNA by
XX RNA interference, useful for modulating expression of TRPM7 gene.
XX
XX Claim 33; SEQ ID NO 11; 98pp; English.
XX
XX The invention relates to a chemically synthesized double stranded short
XX interfering nucleic acid (siNA) molecule (1) directing cleavage of a
XX transient receptor potential cation channel subfamily M member 7 (TRPM7)
XX RNA through RNA interference (RNAi). Each strand of (1) is about 18 to
XX about 23 nucleotides in length, and one strand comprises a nucleotide
XX sequence having sufficient complementarity to the TRPM7 RNA to be
XX directly cleaved. The human TRPM7 gene is located on chromosome 15, more
XX specifically to region 15q21. Also described: (1) a composition (C1)
XX comprising (1) and a carrier or diluent; (2) a conjugate and/or complexes
XX of (1); (3) a kit for modulating the expression of TRPM7 gene; (4) a cell
XX comprising (1); (5) a method for synthesizing (1); (6) a method for
XX screening (1); and (7) an expression vector comprising (1). (1) is useful
XX for modulating the expression of the TRPM7 gene, and so can be used for
XX treating diseases and conditions such as neurological disease or
XX degenerative disease e.g. anoxia, amyotrophic lateral sclerosis, ataxia
XX telangiectasia, cephalic disorders, cerebral hypoxia, congenital
XX myopathy, diabetic neuropathy, Fabry's disease, Lyme disease, Pompe
XX disease, spinal cord injury, stroke, Alzheimer's disease, dementia,
XX chronic epilepsy, Parkinson's disease, Huntington's disease and central
XX nervous system injury. (1) is useful as reagents in a variety of
XX applications such as therapeutic, diagnostic, target validation, genomic
XX discovery, genetic engineering and pharmacogenomic application. (1) has
XX increased resistance to nuclease degradation and improved cellular
XX uptake. The present sequence represents a TRPM7 target and upper (sense)
XX siRNA oligonucleotide from the present invention.

XX New chemically synthesized double stranded short interfering nucleic acid  
PT having complementarity to TRPM7 RNA to direct cleavage of TRPM7 RNA by  
PT RNA interference, useful for modulating expression of TRPM7 gene.  
XX  
XX Claim 33; SEQ ID NO 413; 98pp; English.  
XX  
XX The invention relates to a chemically synthesized double stranded short  
CC interfering nucleic acid (siRNA) molecule (I) directing cleavage of a  
CC transient receptor potential cation channel subfamily M member 7 (TRPM7)  
CC RNA through RNA interference (RNAi). Each strand of (I) is about 18 to  
CC about 23 nucleotides in length, and one strand comprises a nucleotide  
CC sequence having sufficient complementarity to the TRPM7 RNA to be  
CC directly cleaved. The human TRPM7 gene is located on chromosome 15, more  
CC specifically to region 15q21. Also described: (1) a composition (C1)  
CC comprising (I) and a carrier or diluent; (2) a conjugate and/or complexes  
CC of (1); (3) a kit for modulating the expression of TRPM7 gene; (4) a cell  
CC comprising (I); (5) a method for synthesizing (I); (6) a method for  
CC screening (I); and (7) an expression vector comprising (I). (I) is useful  
CC for modulating the expression of the TRPM7 gene, and so can be used for  
CC treating diseases and conditions such as neurological disease or  
CC degenerative disease e.g. anoxia, amyotrophic lateral sclerosis, ataxia  
CC telangiectasia, cephalic disorders, cerebral hypoxia, congenital  
CC myopathy, diabetic neuropathy, Fabry's disease, Lyme disease, Pompe  
CC disease, spinal cord injury, stroke, Alzheimer's disease, dementia,  
CC chronic epilepsy, Parkinson's disease, Huntington's disease and central

CC nervous system injury. (I) is useful as reagents in a variety of  
CC applications such as therapeutic, diagnostic, target validation, genomic  
CC discovery, genetic engineering and pharmacogenomic application. (I) has  
CC increased resistance to nuclease degradation and improved cellular  
CC uptake. The present sequence represents a TRPM7 lower (antisense) siRNA  
CC oligonucleotide from the present invention.

 XX  
 CC The invention relates to chemically synthesized short interfering nucleic  
 CC acids (siRNAs) which downregulate expression of the Egr-1 gene by RNA  
 CC interference. The siRNAs may or may not comprise ribonucleotides, can  
 CC contain deoxyribonucleotides, can be chemically modified and may be  
 CC double or single stranded. They further comprise sense and antisense  
 CC regions, or alternatively are assembled from a sense oligonucleotide and  
 CC an antisense oligonucleotide. Specifically, the siRNAs include short  
 CC interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short  
 CC hairpin RNA (shRNA). The invention also relates to pharmaceutical  
 CC compositions comprising an siRNA targeted to the Human Egr-1 mRNA. The  
 CC invention further discloses expression vectors and host cells comprising  
 CC an siRNA of the invention. The siRNAs are used to modulate expression of  
 CC the Egr-1 gene in cells, tissue explants or organisms (for example by ex  
 CC vivo gene therapy), or in grafts and transplants for the treatment of a  
 CC variety of conditions. The siRNAs may be useful for the development of  
 CC compounds with a cytostatic, antiarthritic, vasotropic, antiinflammatory,  
 CC ophthalmological, antidiabetic, antipsoriatic, cerebroprotective or  
 CC antiarteriosclerotic activity acting by RNA interference. They may be  
 CC used in the treatment of cancer (for example colorectal cancer,  
 CC adenocarcinoma, lymphoma and glioma), ocular disease (for example toxic  
 CC conjunctivitis, bacterial keratitis, uveitic glaucoma and squamous cell  
 CC carcinoma), tumor angiogenesis, and proliferative conditions such as  
 CC diabetic retinopathy, macular degeneration, age related macular  
 CC degeneration, arthritis, psoriasis, Sturge Weber syndrome, restenosis  
 CC and/or arteriosclerosis. The siRNAs may also be used in drug screening,  
 CC diagnosis, therapeutic target identification and validation, genetic  
 CC engineering, pharmacogenomics, studying gene function and gene mapping  
 CC (for example of single nucleotide polymorphisms). The present sequence is  
 CC that of a human Egr-1 gene-targeting siRNA of the invention.

XX  
XX New oligo:nucleotide(s) causing cleavage of target RNA - with RNaseH  
PT activated segment having charged inter-nucleoside links and second  
PT segment with chirally selected links.  
XX  
XX Disclosure; Page 135; 165pp; English.  
XX  
XX This invention describes novel oligonucleosides that causes RNaseH-  
CC mediated cleavage of target RNA comprising (a) an RNaseH-activating  
CC region (R1) of at least 3 consecutive 2'-unsubstituted nucleosides  
CC connected by charged internucleoside links and (b) a non-RNase activating  
CC region (R2) of at least 2 nucleosides, with at least one chirally  
CC selected internucleoside link. The oligonucleosides of the invention have  
CC base sequences complementary to that of target RNA. The products of the  
CC invention are used to inhibit transcription of target RNA in a cell or  
CC organism, they are antisense molecules that also activate RNaseH.  
CC Particularly the oligonucleosides are used in diagnosis and treatment of  
CC disease associated with endogenous or foreign gene expression. Use  
CC against human papilloma virus is exemplified. The modified  
CC internucleoside links improve target specificity, potency and binding  
CC affinity (Ka) compared with racemic analogues. They are also more  
CC resistant to nuclease and so have better in-vivo lifetimes. The chirally  
CC selected linkages in R2 allow control of binding affinity. AAX56855-  
CC X56881 represent oligonucleosides used in the method of the invention

XX Enzymatic nucleic acid molecules having a hammer-head motif - used for  
PT the treatment of arthritis, induction of graft tolerance or treatment of  
PT auto-immune diseases.  
XX  
XX Example 1; Page 154; 307pp; English.  
XX  
XX The present invention describes a novel enzymatic nucleic acid (ENA)  
CC having a hammerhead motif (HM) comprising: (i) at least 5 ribose residues  
CC; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least  
CC ten 2'-O-methyl modifications; and (iv) a 3'-end modification. The ENA's  
CC can inhibit collagenase and stromelysin production in the synovial  
CC membrane of joints for the treatment or prevention of arthritis,  
CC particularly osteoarthritis or rheumatoid arthritis. The ENA's can also  
CC be used to treat antigen presenting cells of a donor to induce tolerance  
CC in a recipient to an alloantigen of a donor. They can also be used for  
CC enhancing graft tolerance or for treating autoimmune disease, and for  
CC treating allergies and other inflammatory conditions. The ENA's can also  
CC be used in diagnosis. Ribozyme therapy impacts on the expression of  
CC stromelysin without introducing the non-specific effects upon gene  
CC expression which accompany treatment with retinoids and dexamethasone.  
CC The concentration of ribozyme required to affect a therapeutic treatment  
CC is lower than that required of antisense molecules, and is highly  
CC specific. The present sequence is used in the exemplification of the  
CC present invention

XX
XX Enzymatic nucleic acid molecules having a hammer-head motif - used for
PT the treatment of arthritis, induction of graft tolerance or treatment of
PT auto-immune diseases.
XX
XX Example 1; Page 154; 307pp; English.
XX
XX The present invention describes a novel enzymatic nucleic acid (ENA)
CC having a hammerhead motif (HM) comprising: (i) at least 5 ribose residues
CC ; (ii) a 2'-C-allyl modification at position 4 of the ENA; (iii) at least
CC ten 2'-O-methyl modifications; and (iv) a 3'-end modification. The ENA's
CC can inhibit collagenase and stromelysin production in the synovial
CC membrane of joints for the treatment or prevention of arthritis,
CC particularly osteoarthritis or rheumatoid arthritis. The ENA's can also
CC be used to treat antigen presenting cells of a donor to induce tolerance
CC in a recipient to an alloantigen of a donor. They can also be used for
CC enhancing graft tolerance or for treating autoimmune disease, and for
CC treating allergies and other inflammatory conditions. The ENA's can also
CC be used in diagnosis. Ribozyme therapy impacts on the expression of
CC stromelysin without introducing the non-specific effects upon gene
CC expression which accompany treatment with retinoids and dexamethasone.
CC The concentration of ribozyme required to affect a therapeutic treatment
CC is lower than that required of antisense molecules, and is highly
CC specific. The present sequence is used in the exemplification of the
CC present invention

XX
XX Oligomers made using chirally pure nucleoside dimers, trimers, or
PT tetramers with enhanced binding affinities.
XX
XX Example 7; Col 37-38; 30pp; English.
XX
XX The invention provides methods for preparing oligomers having phosphonate
CC internucleosidyl linkages of a preselected chirality which hybridize to a
CC target RNA sequence. The method of making comprises: (a) synthesizing a
CC nucleoside dimer, trimer, or tetramer with racemic internucleosidyl
CC phosphonate linkages; (b) purifying the racemic nucleoside to a chirally
CC pure nucleoside; and (c) sequentially linking at least 2 of the chirally
CC pure nucleosides to form a synthetic oligomer that is enriched for
CC phosphonate internucleosidyl linkages of a preselected chirality and is
CC complementary to an RNA target sequence. The methods are useful for
CC providing chirally enriched synthetic oligomers. Rp chirally enriched
CC synthetic oligomers have enhanced binding affinities for RNA compared to
CC oligomers with racemic all methylphosphonate internucleosidyl linkages.
CC Sequences AAX91054-75 represent oligomers chemically synthesised using
CC the method of the invention

XX
XX Identifying differentially methylated genomic CpG dinucleotide sequences
PT associated with cancer, comprises measuring level of methylated genomic
PT CpG dinucleotide sequences for genomic targets in sample and comparing to

```

PT reference level.  
 XX Claim 28; SEQ ID NO 766; 89pp; English.  
 XX  
 CC The invention relates to a method of identifying differentially  
 CC methylated genomic CpG dinucleotide sequences associated with cancer,  
 CC comprising measuring the level of methylated genomic CpG dinucleotide  
 CC sequences for two or more of the genomic targets in sample, and comparing  
 CC the level of methylation at genomic CpG dinucleotide sequences in the  
 CC sample to a reference level of methylated genomic CpG dinucleotide  
 CC sequences. The method is useful for identifying differentially methylated  
 CC genomic CpG dinucleotide sequences associated with cancer in an  
 CC individual. The level of methylation of the differentially methylated  
 CC genomic CpG dinucleotide sequences is used to diagnose cancer in the  
 CC individual, predict the course of cancer, predict the susceptibility of  
 CC cancer, stage the progression of cancer, predict the likelihood of  
 CC overall survival, and predict the likelihood of recurrence of cancer for  
 CC individual. The level of methylation of the differentially methylated  
 CC genomic CpG dinucleotide sequences in the sample is also used to  
 CC determine the effectiveness of a treatment course undergone by the  
 CC individual. The cancer is preferably adenocarcinoma or squamous cell  
 CC carcinoma. The probes are useful for detecting methylation of genomic CpG  
 CC dinucleotide sequences of two or more genomic targets. The present  
 CC sequence represents a CpG site probe.

 XX Detecting mutations in selected genes, useful e.g. for identifying  
 PT therapeutic targets or products, by analyzing DNA in mutated embryonic  
 PT stem cells without phenotypic characterization.  
 XX  
 XX Example 5; Col 31; 66pp; English.  
 PS  
 XX

CC PCR primers AAA05245-A05406 are used to generate amplicons from the mouse  
 CC Sox-3 gene, Sox-2 gene, T gene, tyrosinase gene, Tryp-1 gene, Sry gene,  
 CC MGF (mast cell growth factor) gene, c-kit gene, and the Pax-6 gene. The  
 CC primers are used in a method for the identification of a mutation in a  
 CC selected gene in a tissue without the prior observation of a phenotypic  
 CC alteration in the mutated organism or cell. The method is used to  
 CC identify mutations in a selected gene that encode products of potential  
 CC therapeutic activity or that are potential targets, particularly where  
 CC the gene of interest has been identified as a candidate gene by  
 CC positional cloning. Other applications are determining functions of genes  
 CC detecting the range of phenotypes associated with different mutations  
 CC in a particular gene and identification of particular mutations. Animals  
 CC containing an identified mutation are used as models for studying  
 CC diseases or their treatment, and cells from them for in vitro assessment  
 CC of drug action. Interbreeding of mutant mice is used to investigate  
 CC genetic interaction in the overall phenotype

 PS Claim 2; Page 223; 407pp; English.  
 XX  
 CC The present sequence represents a preferred target sequence for an  
 CC enzymatic nucleic acid (i.e. a ribozyme) which cleaves interleukin-5 (IL-  
 CC 5) mRNA at the nucleotide base position indicated in the DE line. Regions  
 CC of the mRNA that do not form secondary folding structures and that  
 CC contain potential hammerhead and hairpin ribozyme cleavage sites were  
 CC identified by computer analysis. Ribozymes directed against these mRNA  
 CC sequences were designed and synthesised with modifications that improve  
 CC their nuclease resistance. The ribozymes cleave the IL-5 target sequences  
 CC and thereby inhibit IL-5 expression, making them useful for treating  
 CC chronic asthma, e.g. by inhibiting the synthesis of IL-5 in lymphocytes  
 CC and preventing the recruitment and activation of eosinophils. The  
 CC ribozymes can also be used to treat eosinophilia (related to parasitic  
 CC infection or with pulmonary infiltration) and L-tryptophan-associated  
 CC eosinophilia-myalgia syndrome. (Updated on 25-MAR-2003 to correct PI  
 CC field.)

 XX Identification of mutation(s) in genes of interest - without prior  
 PT observation of phenotypic alteration in the mutated organism or cell.  
 XX Example 4; Page 41; 66pp; English.  
 XX PCR primers AAV16001-18 were used to identify mutations in Sox-3 using  
 CC the method of the invention. The primers are located throughout the gene  
 CC and are unique to Sox-3. The method comprises testing a nucleic acid  
 CC sample from a mutated organism for a mutation in a gene of interest  
 CC without the prior observation of a phenotypic alteration in the mutated  
 CC organism resulting from the mutation. Sox-3 is a member of the Sox gene  
 CC family, a family of about 20 genes which all encode a "HMG" box, which is  
 CC a DNA-binding domain. Mice were mutagenised using ENU mutagenesis. The  
 CC mutagenised mice were tested by PCR with each primer set and fluorescent  
 CC single strand conformation polymorphism (SSCP), which identifies mice  
 CC carrying mutations in Sox-3. The method provides mutational screening  
 CC based on genomic and genetic techniques rather than on phenotypic  
 CC observation. The method identifies and characterises genes via  
 CC mutagenesis to identify genes encoding products which may have  
 CC therapeutic benefit. The method also identifies the presence of mutations  
 CC in a gene which do not rely solely upon prior matching of a gene with a  
 CC disease. Heterozygotic organisms can also be screened to identify those  
 CC carrying a mutation in a copy of a gene of interest even though the gene  
 CC may be recessive and therefore causes no phenotypic alteration

 XX Ribozyme which modulates plant gene expression - preferably modulates  
 PT expression of DELTA-9 desaturase or granule bound starch synthase in  
 PT maize or canola.  
 XX  
 XX Claim 40; Page 93; 155pp; English.  
 PS  
 XX The present invention describes an enzymatic nucleic acid molecule (I)  
 CC with RNA cleaving activity, which modulates the expression of a plant  
 CC gene. Also described is a gene comprising a cDNA sequence encoding maize  
 CC Delta-9 desaturase. (I) can be used to modulate expression of a gene,  
 CC preferably Delta-9 desaturase or a granule bound starch synthase (GBSS)  
 CC gene, in a plant (preferably a maize or canola plant). (I) can be used to  
 CC modulate caffeine synthesis in a coffee plant, nicotine production in a  
 CC tobacco plant, fruit ripening processes in an apple, tomato, pear, plum  
 CC or peach plant, flower pigmentation in a rose, petunia, chrysanthemum or  
 CC marigold plant or lignin production in a tobacco, aspen, poplar or pine  
 CC plant

 XX Identifying a mutation in a gene of interest in an organism useful for  
 PT identifying genes encoding products which may have therapeutic benefits.  
 PT  
 XX Example 5; Col 65-66; 70pp; English.  
 PS  
 XX This invention describes a novel mutational screening method based on  
 CC genomic and genetic techniques to identify and characterize a mutation in  
 CC a gene of interest without first selecting a phenotypic characteristic.  
 CC

CC The screening methods are useful for identifying genes encoding products  
 CC which may have therapeutic benefit for treating human or animal diseases.  
 CC The method can be used for the DNA mutation screening of a class or a  
 CC family of genes providing a rapid assay for identifying mutant genes. The  
 CC methods produce organisms which can be used for drug discovery e.g.  
 CC providing a model for the study and treatment of a disease state, allow  
 CC in vitro assessment of drug activity and interbreeding of mutants which  
 CC allow investigation of gene interactions in the overall phenotype. A  
 CC range of phenotypes associated with different mutations, and specified  
 CC mutations in a gene of interest can be determined. The method can be  
 CC adapted to screen for a mutation in two or more genes of interest in an  
 CC organism. The methods allow mutations in a gene of interest to be  
 CC identified without having to rely on matching a gene with a disease.  
 CC AAZ43260-Z43421 represent PCR primers used in the method of the invention

XX New oligonucleotide primer capable of specifically hybridizing to a DNA  
 PT having the sequence of the flanking regions of a microsatellite (e.g.  
 PT M249), useful for HLA-related research, e.g. transplantation matching.

XX Example 2; Page 5; 20pp; English.

XX The invention relates to an oligonucleotide primer capable of  
 CC specifically hybridising to a DNA having the sequence of the flanking  
 CC regions of a microsatellite selected from M2-4-9, M2-2-9, M2-2-12, M2-3-  
 CC 11, M2-2-20, M2-2-21, M2-2-22, M2-2-23, M2-2-24, M2-4-25, M2-4-26, M2-2-  
 CC 29, M2-2-32, M2-4-32, M2-4-33, M2-4-37, M2-3-22, M2-2-36, M2-5-11, M2-2-  
 CC 46, and M2-2-48. The primer is useful for determining the number of  
 CC repeat units of the microsatellite cited above. The primer is useful in  
 CC HLA-related research, such as genetic mapping of HLA class II-associated  
 CC diseases, transplantation matching, population genetics, and  
 CC identification of recombination hot spots as well as linkage  
 CC disequilibrium studies. The present sequence represents the human  
 CC microsatellite repeat M2\_3\_8.

XX XX
XX Constructing synthetic polynucleotide for modulating the quality of a
XX selected phenotype displayed by an organism comprises replacing a first
XX PT codon with a synonymous codon to construct the synthetic polynucleotide.
XX PT
XX Example 1; SEQ ID NO 3; 86pp; English.
XX PS
XX The present invention describes a method for constructing a synthetic
XX CC polynucleotide from which a polypeptide is producible to confer a
XX CC selected phenotype to an organism of interest or part in a different
XX CC quality than that conferred by a parent polynucleotide that encodes the
XX CC same polypeptide. The method comprises: (a) selecting a first codon of
XX CC the parent polynucleotide for replacement with a synonymous codon, where
XX CC the synonymous codon is selected on the basis that it exhibits a
XX CC different phenotypic preference than the first codon in a comparison of
XX CC phenotypic preferences in test organisms or parts, where the test
XX CC organism are selected from organisms of the same species as the organism
XX CC of interest and organisms that are related to the organisms of interest;
XX CC and (b) replacing the first codon with the synonymous codon to construct
XX CC the synthetic polynucleotide. Also described: (1) a method for
XX CC determining the phenotypic preference of a first codon in an organism of
XX CC interest or its parts; (2) a synthetic polynucleotide constructed from
XX CC the method above; (3) an organism or interest or part containing a
XX CC synthetic polynucleotide constructed from the method above; (4) an
XX CC organism or interest or part containing a synthetic construct that
XX CC comprises a regulatory polynucleotide operably linked to a tandem repeat
XX CC of a first codon fused in frame with a reporter polynucleotide that
XX CC encodes a reporter protein, which produces, or is predicted to produce a
XX CC selected phenotype or a phenotype of the same class as the selected
XX CC phenotype in the organism or part; (5) a method of modulating the quality
XX CC of a selected phenotype that is displayed by an organism of interest or
XX CC part and that results from the expression of a parent polynucleotide that
XX CC encodes the polypeptide; (6) a method of enhancing the quality of a
XX CC selected phenotype that is displayed by an organism of interest or part
XX CC and that results from the expression of a parent polynucleotide that
XX CC encodes the polypeptide; and (7) a method of reducing the quality of a
XX CC selected phenotype that is displayed by an organism of interest or part
XX CC and that results from the expression of a parent polynucleotide that
XX CC encodes the polypeptide. The method is useful for constructing a
XX CC synthetic polynucleotide from which a polypeptide is producible to confer
XX CC a selected phenotype to an organism of interest or part in a different
XX CC quality than that conferred by a parent polynucleotide that encodes the
XX CC same polypeptide. It is useful for modulating the quality of a selected
XX CC phenotype displayed by an organism or part. The present sequence encodes
XX CC a synthetic leader sequence, which is used in an example from the present
XX CC invention.

XX Constructing synthetic polynucleotide for modulating the quality of a  
 PT selected phenotype displayed by an organism comprises replacing a first  
 PT codon with a synonymous codon to construct the synthetic polynucleotide.

XX Example 1; SEQ ID NO 9; 86pp; English.

XX The present invention describes a method for constructing a synthetic  
 CC polynucleotide from which a polypeptide is producible to confer a  
 CC selected phenotype to an organism of interest or part in a different  
 CC quality than that conferred by a parent polynucleotide that encodes the  
 CC same polypeptide. The method comprises: (a) selecting a first codon of  
 CC the parent polynucleotide for replacement with a synonymous codon, where  
 CC the synonymous codon is selected on the basis that it exhibits a  
 CC different phenotypic preference than the first codon in a comparison of  
 CC phenotypic preferences in test organisms or parts, where the test  
 CC organism are selected from organisms of the same species as the organism  
 CC of interest and organisms that are related to the organisms of interest;  
 CC and (b) replacing the first codon with the synonymous codon to construct  
 CC the synthetic polynucleotide. Also described: (1) a method for  
 CC determining the phenotypic preference of a first codon in an organism of  
 CC interest or its parts; (2) a synthetic polynucleotide constructed from  
 CC the method above; (3) an organism or interest or part containing a  
 CC synthetic polynucleotide constructed from the method above; (4) an  
 CC organism or interest or part containing a synthetic construct that  
 CC comprises a regulatory polynucleotide operably linked to a tandem repeat  
 CC of a first codon fused in frame with a reporter polynucleotide that  
 CC encodes a reporter protein, which produces, or is predicted to produce a  
 CC selected phenotype or a phenotype of the same class as the selected

CC phenotype in the organism or part; (5) a method of modulating the quality  
 CC of a selected phenotype that is displayed by an organism of interest or  
 CC part and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide; (6) a method of enhancing the quality of a  
 CC selected phenotype that is displayed by an organism of interest or part  
 CC and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide; and (7) a method of reducing the quality of a  
 CC selected phenotype that is displayed by an organism of interest or part  
 CC and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide. The method is useful for constructing a  
 CC synthetic polynucleotide from which a polypeptide is producible to confer  
 CC a selected phenotype to an organism of interest or part in a different  
 CC quality than that conferred by a parent polynucleotide that encodes the  
 CC same polypeptide. It is useful for modulating the quality of a selected  
 CC phenotype displayed by an organism or part. The present sequence encodes  
 CC a synthetic leader sequence, which is used in an example from the present  
 CC invention.

XX Constructing synthetic polynucleotide for modulating the quality of a  
 PT selected phenotype displayed by an organism comprises replacing a first  
 PT codon with a synonymous codon to construct the synthetic polynucleotide.

XX Example 1; SEQ ID NO 19; 86pp; English.

XX The present invention describes a method for constructing a synthetic  
 CC polynucleotide from which a polypeptide is producible to confer a  
 CC selected phenotype to an organism of interest or part in a different  
 CC quality than that conferred by a parent polynucleotide that encodes the  
 CC same polypeptide. The method comprises: (a) selecting a first codon of  
 CC the parent polynucleotide for replacement with a synonymous codon, where  
 CC the synonymous codon is selected on the basis that it exhibits a  
 CC different phenotypic preference than the first codon in a comparison of  
 CC phenotypic preferences in test organisms or parts, where the test

CC organism are selected from organisms of the same species as the organism  
 CC of interest and organisms that are related to the organisms of interest;  
 CC and (b) replacing the first codon with the synonymous codon to construct  
 CC the synthetic polynucleotide. Also described: (1) a method for  
 CC determining the phenotypic preference of a first codon in an organism of  
 CC interest or its parts; (2) a synthetic polynucleotide constructed from  
 CC the method above; (3) an organism or interest or part containing a  
 CC synthetic polynucleotide constructed from the method above; (4) an  
 CC organism or interest or part containing a synthetic construct that  
 CC comprises a regulatory polynucleotide operably linked to a tandem repeat  
 CC of a first codon fused in frame with a reporter polynucleotide that  
 CC encodes a reporter protein, which produces, or is predicted to produce a  
 CC selected phenotype or a phenotype of the same class as the selected  
 CC phenotype in the organism or part; (5) a method of modulating the quality  
 CC of a selected phenotype that is displayed by an organism of interest or  
 CC part and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide; (6) a method of enhancing the quality of a  
 CC selected phenotype that is displayed by an organism of interest or part  
 CC and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide; and (7) a method of reducing the quality of a  
 CC selected phenotype that is displayed by an organism of interest or part  
 CC and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide. The method is useful for constructing a  
 CC synthetic polynucleotide from which a polypeptide is producible to confer  
 CC a selected phenotype to an organism of interest or part in a different  
 CC quality than that conferred by a parent polynucleotide that encodes the  
 CC same polypeptide. It is useful for modulating the quality of a selected  
 CC phenotype displayed by an organism or part. The present sequence encodes  
 CC a synthetic leader sequence, which is used in an example from the present  
 CC invention.

PT Constructing synthetic polynucleotide for modulating the quality of a  
 PT selected phenotype displayed by an organism comprises replacing a first

PT codon with a synonymous codon to construct the synthetic polynucleotide.

XX Example 1; SEQ ID NO 21; 86pp; English.

CC The present invention describes a method for constructing a synthetic  
 CC polynucleotide from which a polypeptide is producible to confer a  
 CC selected phenotype to an organism of interest or part in a different  
 CC quality than that conferred by a parent polynucleotide that encodes the  
 CC same polypeptide. The method comprises: (a) selecting a first codon of  
 CC the parent polynucleotide for replacement with a synonymous codon, where  
 CC the synonymous codon is selected on the basis that it exhibits a  
 CC different phenotypic preference than the first codon in a comparison of  
 CC phenotypic preferences in test organisms or parts, where the test  
 CC organism are selected from organisms of the same species as the organism  
 CC of interest and organisms that are related to the organisms of interest;  
 CC and (b) replacing the first codon with the synonymous codon to construct  
 CC the synthetic polynucleotide. Also described: (1) a method for  
 CC determining the phenotypic preference of a first codon in an organism of  
 CC interest or its parts; (2) a synthetic polynucleotide constructed from  
 CC the method above; (3) an organism or interest or part containing a  
 CC synthetic polynucleotide constructed from the method above; (4) an  
 CC organism or interest or part containing a synthetic construct that  
 CC comprises a regulatory polynucleotide operably linked to a tandem repeat  
 CC of a first codon fused in frame with a reporter polynucleotide that  
 CC encodes a reporter protein, which produces, or is predicted to produce a  
 CC selected phenotype or a phenotype of the same class as the selected  
 CC phenotype in the organism or part; (5) a method of modulating the quality  
 CC of a selected phenotype that is displayed by an organism of interest or  
 CC part and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide; (6) a method of enhancing the quality of a  
 CC selected phenotype that is displayed by an organism of interest or part  
 CC and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide; and (7) a method of reducing the quality of a  
 CC selected phenotype that is displayed by an organism of interest or part  
 CC and that results from the expression of a parent polynucleotide that  
 CC encodes the polypeptide. The method is useful for constructing a  
 CC synthetic polynucleotide from which a polypeptide is producible to confer  
 CC a selected phenotype to an organism of interest or part in a different  
 CC quality than that conferred by a parent polynucleotide that encodes the  
 CC same polypeptide. It is useful for modulating the quality of a selected  
 CC phenotype displayed by an organism or part. The present sequence encodes  
 CC a synthetic leader sequence, which is used in an example from the present  
 CC invention.

PT Constructing synthetic polynucleotide for modulating the quality of a
PT selected phenotype displayed by an organism comprises replacing a first
PT codon with a synonymous codon to construct the synthetic polynucleotide.
XX
XX Example 1; SEQ ID NO 99; 86pp; English.
XX
XX The present invention describes a method for constructing a synthetic
XX polynucleotide from which a polypeptide is producible to confer a
XX selected phenotype to an organism of interest or part in a different
XX quality than that conferred by a parent polynucleotide that encodes the
XX same polypeptide. The method comprises: (a) selecting a first codon of
XX the parent polynucleotide for replacement with a synonymous codon, where
XX the synonymous codon is selected on the basis that it exhibits a
XX different phenotypic preference than the first codon in a comparison of
XX phenotypic preferences in test organisms or parts, where the test
XX organism are selected from organisms of the same species as the organism
XX of interest and organisms that are related to the organisms of interest;
XX and (b) replacing the first codon with the synonymous codon to construct
XX the synthetic polynucleotide. Also described: (1) a method for
XX determining the phenotypic preference of a first codon in an organism of
XX interest or its parts; (2) a synthetic polynucleotide constructed from
XX the method above; (3) an organism of interest or part containing a
XX synthetic polynucleotide constructed from the method above; (4) an
XX organism of interest or part containing a synthetic construct that
XX comprises a regulatory polynucleotide operably linked to a tandem repeat
XX of a first codon fused in frame with a reporter polynucleotide that
XX encodes a reporter protein, which produces, or is predicted to produce a
XX selected phenotype or a phenotype of the same class as the selected
XX phenotype in the organism or part; (5) a method of modulating the quality
XX of a selected phenotype that is displayed by an organism of interest or
XX part and that results from the expression of a parent polynucleotide that
XX encodes the polypeptide; (6) a method of enhancing the quality of a
XX selected phenotype that is displayed by an organism of interest or part
XX and that results from the expression of a parent polynucleotide that
XX encodes the polypeptide; and (7) a method of reducing the quality of a
XX selected phenotype that is displayed by an organism of interest or part
XX and that results from the expression of a parent polynucleotide that
XX encodes the polypeptide. The method is useful for constructing a
XX synthetic polynucleotide from which a polypeptide is producible to confer
XX a selected phenotype to an organism of interest or part in a different
XX quality than that conferred by a parent polynucleotide that encodes the
XX same polypeptide. It is useful for modulating the quality of a selected
XX phenotype displayed by an organism or part. The present sequence encodes
XX a synthetic leader sequence, which is used in an example from the present
XX invention.

XX regions which are associated with breast cancer in a nucleic acid sample
XX from a subject.
XX
XX Example 4; Page 83; 289pp; English.
XX
XX The invention relates to a novel method for identifying a subject at risk
XX of breast cancer comprising detecting the presence or absence of one or
XX more polymorphic variations associated with breast cancer in a nucleic
XX acid sample from a subject. The method of the invention has cytostatic
XX applications and may be useful for identifying a subject at risk of
XX breast cancer, for early diagnosis, prevention and treatment of breast
XX cancer, possibly via gene therapy, as well as to analyse and predict a
XX response to a breast cancer treatment and in clinical drug trials. The
XX current sequence is that of an extend primer (also described as probe) of
XX the invention which was used to genotype human intercellular adhesion
XX molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor;BB2
XX ;CD54;cell surface glycoprotein P3.58) has been mapped to chromosomal
XX position 19p13.3-p13.2, ICAM-4 (Landsteiner-Wiener blood group;LW) has
XX been mapped to chromosomal position 19p13.2-cen and ICAM-5
XX (telencephalin) has been mapped to chromosomal position 19p13.2.

XX
XX Novel polynucleotide having ability to increase labeling efficiency of
PT labeling compound, useful for synthesizing labeled protein in presence of
PT labeling compound.
XX
XX Disclosure; Fig 10; 140pp; Japanese.
XX
XX The invention relates to a polynucleotide (I) for synthesizing labeled
CC protein and having ability to increase labeling efficiency of labeling
CC compound, where protein is produced by adding labeling compound to 3',
CC terminal of sequence encoding target protein of gene template, where
CC labeling compound has label portion and acceptor portion having compound
CC capable of binding to C-terminus of label portion and translating gene
CC template in presence of labeled compound. (I) is useful for producing a
CC labeling protein, which involves preparing a gene template by adding (I)
CC to the 3'-terminal of base sequence encoding the target protein.
CC translating the gene template in the presence of the labeling compound
CC containing acceptor portion and label portion, and obtaining protein
CC synthesized in the translation system. The base sequence encoding the
CC target protein either contains the termination codon or does not contain
CC the termination codon. The labeling compound is added after the
CC initiation of the translation. The labeled protein (LPI) is useful in a
CC performance-analysis of a protein, which involves contacting the test
CC substance with (LPI), and analyzing the interaction between the protein
CC and the test substance. (I) has the ability to increase labeling
CC efficiency of a labeling compound and thus effectively produces labeled
CC protein. This sequence corresponds to a sequence used in the method of
CC the invention.

XX New short interfering nucleic acid, useful e.g. for treatment and  
PT diagnosis of obesity and diabetes, downregulates expression of the gene  
PT for gastric inhibitory polypeptide receptor.  
XX Example 3; SEQ ID NO 24; 141pp; English.  
XX The invention relates to short interfering nucleic acids (siNA) which  
CC downregulate expression of the human gastric inhibitory polypeptide (GIP)  
CC or the GIP receptor (GIPr) gene by RNA interference. The siNAs may or may  
CC not comprise ribonucleotides and may be double or single stranded. They  
CC further comprise sense and antisense regions, or alternatively are  
CC assembled from a sense oligonucleotide and an antisense oligonucleotide.

CC Specifically, the siNAs include short interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified, can contain deoxyribonucleotides, and can be chemically synthesised, expressed from a vector or enzymatically synthesised. The invention also relates to kits for the in vitro or in vivo delivery of siNA, conjugates and/or complexes of siNA; and vectors that express siNA. The siNAs are used to modulate expression of the GIPr gene in cells, tissue explants or organisms (e.g., by ex vivo gene therapy), or in grafts and transplants for the treatment of a variety of conditions. They may be used for treating treating obesity or type 1 or 2 diabetes. The siNAs are also useful for drug screening, diagnosis, pharmacogenomics, studying gene function, and gene mapping (e.g., of single nucleotide polymorphisms). The present sequence represents the upper strand of a human GIP-targeted double-stranded siNA, which is identical to the GIP transcript target sequence.
